optical microresonators have generated much progress in many aspects of optical science such as in optical buffering wavelength division multiplexed filters for optical networks optical switching and in the enhancement of nonlinear effects all these applications are made possible by the confinement of light within a small modal volume in the microresonator the ability to actively tune the resonance within a microresonator has resulted in systems that can dynamically manipulate the flow of light this thesis discusses some of the novel capabilities of these dynamic systems chapters 3 4 discusses the use of a dynamic delay line to suppress dispersion and to overcome the gain bandwidth product constraint of slow light structures this is followed by chapter 5 which introduces a light stopping scheme based on loss modulation finally chapter 6 shows how coherent control can be used in a microresonator system to enhance optical switching

in the dynamic digital age the widespread use of computers has transformed engineering and science a realistic and successful solution of an engineering problem usually begins with an accurate physical model of the problem and a proper understanding of the assumptions employed with computers and appropriate software we can model and analyze complex physical systems and problems however efficient and accurate use of numerical results obtained from computer programs requires considerable background and advanced working knowledge to avoid blunders and the blind acceptance of computer results this book provides the background and knowledge necessary to avoid these pitfalls especially the most commonly used numerical methods employed in the solution of physical problems it offers an in depth presentation of the numerical methods for scales from nano to macro in nine self contained chapters with extensive problems and up to date references covering trends and new developments in simulation and computation weighted residuals methods finite difference methods finite element methods finite strip layer prism methods boundary element methods meshless methods molecular dynamics multiphysics problems multiscale methods
