Message to a Blackman in Africa, 2nd Edition 2016-02-23

the second edition of the message to a blackman in africa is an expansion of the first edition which was written three years ago this is a doctrine of the african social insurgency it defies conventional thinking with an open argument that prods the courageousness of an african mind that has suffered the injustices of colonial victimization indoctrinations dehumanization and a psychological low class alienation because i believe that africans like all other races are psychologically adept and ideologically fit to play a major role in issues of human civilization like they did back then during the dark age and before colonialism with the introduction of the tablet writing systems astrology architecture mathematics fishing building structures early scientific education steel coins letters jewelleries and many things that later attracted the western countries to tour into africa for various reasons which ended up with some western felons developing enough jealous ferocity and hate to rape the continent africa by colonizing it i personally believe that a human mind can achieve far greater things when working under no psychological custody this book is very provocative since it follows the patterns of re educating the mis educated african mind that journey of re educating the mis educated minds was started many years ago by the likes of frederick douglas carter g woodson marcus garvey frantz fanon kwame nkrumah malcolm x steve biko louis farrakhan robert sobukwe thomas sankara patrice lumumba dr hendrick clarke dr umar johnson and many others whom have died in the course to re educate africans to honour protect love and uplift their own kind after having been indoctrinated for a long time and being taught to hate their own kind this message shall remain nothing new but rather a unique narrative in context and very thought provoking since the teachings of pan africanism and neo black consciousness have always been disturbed by the international community some few european countries and some few american countries who has control of many african countries because they are scared of a joint africa since africans united will break their capital gains hence they undercut black consciousness as a hate and racist teaching while reality tells that any race that takes pride in their own kind reflect patriotism the truth is that the african race has suffered far too long and there is no way that that race trauma can be healed without mind doctors social doctors educational doctors economic doctors political doctors scientific doctors technological doctors and production doctors so look at this book as a mind psychological and social doctor and treat it as such i am not teaching the hate of european or american races but i m narrating this message to play part in the re education of a blackman into an african alfabulianian

sex is the queen of problems in evolutionary biology generations of researchers have investigated one of the last remaining evolutionary paradoxes why sex exists at all given that sexual reproduction is costly from an evolutionary point of view one could wonder why not all animals and plants reproduce asexually dozens of contemporary hypotheses attempt to explain the prevalence of sex and its advantages and predict the early extinction of fully asexual lineages the major theme of this book is what is the fate of animal and plant groups in which sex is lost initial chapters discuss theory behind asexual life what major disadvantages do asexual groups have to face what are the genetic and ecological consequences and what does this theory predict for more applied aspects of asexual life for example in agricultural pests diseases as well as in cultural crops such as grapes cases studies in many animals focusing on both invertebrates and vertebrates and plants reveal parallel but also singularly novel adaptations to the absence of meiosis and syngamy and last but not least are asexuals really doomed to early extinction or do genuine ancient asexuals exist this book assembles contributions from the most important research groups dealing with asexual evolution in eukaryotes it is a milestone in research on parthenogenesis and will be useful to undergraduate as well as graduate students and to senior researchers in all fields of evolutionary biology as the paradox of sex remains its queen of problems

since the first suffering supplicant offered a prayer to his god or the first mother cradled an ailing child in her caring arms we have witnessed how human health and healing goes beyond any inventory of parts and infusion of chemicals we humans are a complex melding of thought emotion spirit and energy and each of those components is as critical to our well being as our physiological status even if we are just beginning to quantify and document these seemingly intangible aspects to ignore them in the practice of medicine is neglect and an invitation to do harm now in its second edition the scientific basis of integrative medicine continues to provide doctors and other health practitioners with information on complementary and

alternative approaches to health that is authoritative scientifically based and epidemiologically substantiated written for doctors and healthcare professionals by pioneering practitioners and updated with the newest research across an increasing range of possibilities the new edition of this bestselling work establishes the scientific basis for the mind body connection and then documents the puissant interactions of the endocrine immune nervous and stress systems that so profoundly influence our lives examines that healing dimension of spirituality which informs but transcends the five senses investigates how hope faith and love aid healing discusses how the emotional presence of a practitioner affects patient outcome considers the incorporation of a unified theory that can account for the existence of health enhancing energy fields within as well as outside the human body integral physiology serves as a bridge between western medical knowledge and the equally valuable but less well recognized eastern systems of medicine the authors refer to it as integrative because it combines important western biological knowledge with forms of healing that incorporate the mental and emotional and spiritual aspects that are essential to health because those aspects are what make us essentially human
