~~Glasnik Matematicki 1988 compactness is related to~~
a number of fundamental concepts of mathematics particularly important are compact hausdorff spaces or compacta compactness appeared in mathematics for the first time as one of the main topological properties of an interval a square a sphere and any closed bounded subset of a finite dimensional euclidean space once it was realized that precisely this property was responsible for a series of fundamental facts related to those sets such as boundedness and uniform continuity of continuous functions defined on them compactness was given an abstract definition in the language of general topology reaching far beyond the class of metric spaces this immensely extended the realm of application of this concept including in particular function spaces of quite general nature the fact that general topology provided an adequate language for a description of the concept of compactness and secured a natural medium for its harmonious development is a major credit to this area of mathematics the final formulation of a general definition of compactness and the creation of the foundations of the theory of compact topological spaces are due to p s aleksandrov and urysohn see aleksandrov and urysohn 1971

Bulletin of the Polish Academy of Sciences 1990

this is the first of the encyclopaedia volumes devoted to general topology it has two parts the first outlines the basic concepts and constructions of general topology including several topics which have not previously been covered in english language texts the second part

~~presents a survey of dimension theory from the~~
very beginnings to the most important recent developments the principal ideas and methods are treated in detail and the main results are provided with sketches of proofs the authors have succeeded admirably in the difficult task of writing a book which will not only be accessible to the general scientist and the undergraduate but will also appeal to the professional mathematician the authors efforts to detail the relationship between more specialized topics and the central themes of topology give the book a broad scholarly appeal which far transcends narrow disciplinary lines

Proceedings of the Royal Horticultural Society

1864 this reference work deals with important topics in general topology and their role in functional analysis and axiomatic set theory for graduate students and researchers working in topology functional analysis set theory and probability theory it provides a guide to recent research findings with three contributions by arhangel skii and choban

Gardeners' Chronicle 1843 this book is designed for the reader who wants to get a general view of the terminology of general topology with minimal time and effort the reader whom we assume to have only a rudimentary knowledge of set theory algebra and analysis will be able to find what they want if they will properly use the index however this book contains very few proofs and the reader who wants to study more systematically will find sufficiently many references in the book key features more terms from general topology than any

General Topology II 2012-12-06 geometric topology
is a foundational component of modern mathematics
involving the study of spacial properties and
invariants of familiar objects such as manifolds
and complexes this volume which is intended both
as an introduction to the subject and as a wide
ranging resouce for those already grounded in it
consists of 21 expository surveys written by
leading experts and covering active areas of
current research they provide the reader with an
up to date overview of this flourishing branch of
mathematics

Mathematica Japonicae 1984 the proceedings of an

various aspects of general algebraic and low
dimensional topology

General Topology I 2012-12-06 proceedings of the
bb fest 96 a conference held at the university of
cape town 15 20 july 1996 on category theory and
its applications to topology order and algebra

Glasnik Matematicki 1988 this volume contains the
proceedings of the special session on modern
methods in continuum theory presented at the 100th
annual joint mathematics meetings held in
cincinnati ohio it also features the houston
problem book which includes a recently updated set
of 200 problems accumulated over several years at
the university of houston these proceedings and
problems are aimed at pure and applied
mathematicians topologists geometers physicists

General Topology III 2013-03-09 this third volume in vladimir tkachuk s series on cp theory problems applies all modern methods of cp theory to study compactness like properties in function spaces and introduces the reader to the theory of compact spaces widely used in functional analysis the text is designed to bring a dedicated reader from basic topological principles to the frontiers of modern research covering a wide variety of topics in cp theory and general topology at the professional level the first volume topological and function spaces 2011 provided an introduction from scratch to cp theory and general topology preparing the reader for a professional understanding of cp theory in the last section of its main text the second volume special features of function spaces 2014 continued from the first giving reasonably complete coverage of cp theory systematically introducing each of the major topics and providing 500 carefully selected problems and exercises with complete solutions this third volume is self contained and works in tandem with the other two containing five hundred carefully selected problems and solutions it can also be considered as an introduction to advanced set theory and descriptive set theory presenting diverse topics of the theory of function spaces with the topology of point wise convergence or cp theory which exists at the intersection of topological algebra functional analysis and general topology

Glasnik Matematicki 1983 a topological embedding
is a homeomorphism of one space onto a subspace of
another the book analyzes how and when objects
like polyhedra or manifolds embed in a given
higher dimensional manifold the main problem is to
determine when two topological embeddings of the
same object are equivalent in the sense of
differing only by a homeomorphism of the ambient
manifold knot theory is the special case of
spheres smoothly embedded in spheres in this book
much more general spaces and much more general
embeddings are considered a key aspect of the main
problem is taming when is a topological embedding

~~of a polyhedron equivalent to a piecewise linear~~
embedding a central theme of the book is the fundamental role played by local homotopy properties of the complement in answering this taming question the book begins with a fresh description of the various classic examples of wild embeddings i e embeddings inequivalent to piecewise linear embeddings engulfing the fundamental tool of the subject is developed next after that the study of embeddings is organized by codimension the difference between the ambient dimension and the dimension of the embedded space in all codimensions greater than two topological embeddings of compacta are approximated by nicer embeddings nice embeddings of polyhedra are tamed topological embeddings of polyhedra are approximated by piecewise linear embeddings and piecewise linear embeddings are locally unknotted complete details of the codimension three proofs including the requisite piecewise linear tools are provided the treatment of codimension two embeddings includes a self contained elementary exposition of the algebraic invariants needed to construct counterexamples to the approximation and existence of embeddings the treatment of codimension one embeddings includes the locally flat approximation theorem for manifolds as well as the characterization of local flatness in terms of local homotopy properties
