journalists always very direct and in search of sensation essentially asked me two questions on the occasion of this workshop what were the goals of the meeting with the improvement of diagnosis through the development of image techniques didn't the contrast media already have their future behind them many answers were provided during the course of the workshop and in order to best answer the journalists i proposed the following synopsis 1 since the 1979 colorado springs workshop organized by e lasser progress has been so rapid and the newly available works so numerous that another meeting on an international level for the purpose of presenting and discussing these advances appeared indispensable why not then in europe and why not in lyon to expand on this progress by 1981 the new contrast media with less hyperosmolar molecules still in the trial stage in 1979 were almost all available commercially for angiography albeit at prohibitive prices the advantages of these various media are becoming better known moreover in the wake of lasser's work our understanding of the pathophysiology of their noxious effects is also advancing rapidly owing to the use of models for the target organs heart vessel wall nervous system kidney and

for the more general reactions blood cells coagulation complement system circulating enzymatic systems in addition further new molecules are currently being studied in research laboratories 2
