Understanding Economic Development

2009

an invaluable survey of the literature on growth colin white argues persuasively and expertly that any attempt to solve the profound mystery of economic growth at the large scales of world history must move beyond the limited vision of neo classical economic theory and incorporate the narrative methods and perspectives of history as well this is a superb overview and critique of contemporary attempts to explain economic growth and a perceptive re examination of the whole issue of growth in human history david christian macquarie university australia colin white transcends a number of false dichotomies in this work he shows that we need both theory and history in order to comprehend the transition to modern economic growth he appreciates that this transition was neither inevitable as many theorists argue nor entirely contingent as historical treatments often suggest he argues that advice to present day less developed countries should combine a general understanding of the process of transition with detailed analysis of the history and conditions of the country in question he appreciates that it makes sense to speak of an industrial revolution while also recognizing that this was a gradual process that in turn built upon even more gradual changes in earlier centuries in the british economy less obviously but importantly he realizes that we can best understand economic growth if we recognize the limitations of each scholarly approach in order to integrate the best of these rick szostak university of alberta canada this fascinating book considers one of the most important problems in economics the

inception of modern economic development there is at present no satisfactory explanation of the inception of modern economic development an excessive focus on either pure theory or on unique histories limits the explanatory power this book realises the need to integrate the two approaches moving beyond the proximate causes of economic theory to review the role in an analytic narrative of significant ultimate causes geography risk environments human capital and institutions colin white distils the conclusions of a vast literature drawing from economics economic history and business and management exploring economic theory demonstrating limitations and highlighting alternative approaches particular attention is paid to the appropriate role of innovative entrepreneurs and of government and three case studies illustrate how to build an analytic narrative showing how far we can generalise about the determinants of economic development and in particular how to understand the specific determinants in individual countries this book will prove a stimulating and thought provoking read to academics students and researchers with an interest in economics and economic development

The Corporate Financiers

2014-11-24

the corporate financiers is the fifth book in a series of discussions about the great minds in the history and theory of finance while the series addresses the contributions of scholars in our understanding of modern finance this volume presents the ways in which a corporation creates value more than two centuries ago adam smith explained the concept of division of labor and the efficiencies of specialization as the mechanism in which a firm creates value however corporations now find themselves outsourcing some processes to other firms as an alternative way to create value there must be other economic forces at work than simply the internal efficiencies of a firm we begin by describing the work of a rather obscure scholar named john burr williams who demonstrated in 1938 how the earnings of a firm are capitalized into corporate value through its stock price we then delve into the inner workings of the modern corporation by describing the contributions of nobel memorial prize winners ronald coase and oliver williamson more than any others these scholars created a renewed appreciation for our

understanding of the institutional detail of the modern corporation in reducing costs and increasing efficiency while coase and williamson provided meaningful descriptions of the advantage of a corporation they did not offer prescriptions for the avenues the corporation can create more value in an era when new technologies make outsourcing and telecommuting increasingly possible michael jensen and william meckling describe in greater detail the nature of the implicit contracts a corporation employs and recommend remedies to various problems that arise when the goals of the corporation are not aligned with the incentives of its agents we also describe the further nuances to these relationships as offered by armen alchian and harold demsetz we treat the lives of these extraordinary individuals who looked at a very familiar problem in a sufficiently novel light to change the way all look at corporations ever since that is the test of genius

Changing Governance of Local Economies: Responses of European Local Production Systems

2004-02-26

this book examines patterns of economic governance in three specific contrasting contexts machinery producing districts declining steel cities and clusters of high technology activities building on the work of their previous book local production systems in europe rise or demise oup 2001 which charted the recent development of local clusters of specialized manufacturing among small and medium sized enterprises smes in france germany italy and the unitedkingdom the authors find patterns of economic governance far more complex and dynamic than usually described in a literature which insists on identifying simple national approaches the machinery industries were often identified in the literature of the 1980s as prominent cases of industrial district formation which were then considerably weakened by the crises of the mid 1990s did clustering help these industries and their associated districts to respond to challenge or only weaken them further the case studies focus on the bologna and modena area of emilia romagna stuttgart in baden württemberg birmingham and coventry in the english west midlands butgenerally in france where there are very few local concentrations even while some thought local production systems were in crisis national governments and the european commission continued to recommend their approach to areas experiencing economic decline this was particularly the case for cities that had been dependent on a small number of large corporations in industries that would no longer be major employers political and business leaders in these areas were

encouraged to diversify in particular through smes could this be done in response to external pressure given that successful local production systems depend on endogenous vitality the authors ask these questions of former steel producing cities st etienne duisburg piombino and sheffield the idea that local production systems had had their day was challenged by clear evidence of clustering among smes in a number of flourishing high tech industries in parts of the usa and western europe why do scientists other specialists and firms actively embedded in global networks bother with geographical proximity this question is addressed by examining the software firms at grenoble the mass media cluster in cologne the information technology sector around pisa and the oxfordshire biotechnology region

the corporation is one of the most important and remarkable institutions in the world it affects all our lives continuously it feeds entertains houses and employs us it generates vast amounts of revenue for those who own it and it invests a substantial proportion of the wealth that we possess but the corporation is also the cause of immense problems and suffering a source of poverty and pollution and its failures are increasing how is the corporation failing us why is it happening what should we do to restore trust in it while governments are subject to repeated questioning and scrutiny the corporation receives relatively little attention firm commitment provides a lucid and insightful account of the role of the corporation

in modern society and explains why its problems are growing it gives a fresh perspective on the crises in financial markets developing countries and the environment based on decades of analysis and research it describes a new approach to thinking about the firm which not only stops it destroying us but turns it into the means of protecting our environment addressing social problems and creating new sources of entrepreneurship and innovation it sets out an agenda for converting the corporation into a twenty first century organization that we will value and trust it takes you on a journey that starts in the galapagos ends in ancient egypt and in the process brings you to a new level of appreciation of the economic world we inhabit
