Lars Dannecker developed a novel online forecasting process that significantly improves how forecasts are calculated it increases forecasting efficiency and accuracy as well as allowing the process to adapt to different situations and applications improving the forecasting efficiency is a key pre requisite for ensuring stable electricity grids in the face of an increasing amount of renewable energy sources it is also important to facilitate the move from static day ahead electricity trading towards more dynamic real time marketplaces the online forecasting process is realized by a number of approaches on the logical as well as on the physical layer that we introduce in the course of this book nominated for the Georg Helm Preis 2015 awarded by the Technische Universität Dresden
