sharepoint provides a vital service to businesses content sharing over intranet and internet sites microsoft is investing tons of research and development money into content sharing technologies sharepoint is the next big thing for ms office users especially in a world where many work teams are becoming geographically dispersed sharepoint 2007 is a big improvement over former releases due to enhanced security better search capabilities and more robust functionality lots of change means that users will have to come up to speed on the new enhancements with microsoft sharepoint 2007 technologies readers will gain a working knowledge of the architecture administration and end user features offered by sharepoint 2007 this book also provides practical techniques to help it professionals integrate sharepoint with other ms products such as exchange server the expertise of the authors who have helped many businesses leverage microsoft technologies makes this book an invaluable tool to anyone interested in deploying sharepoint 07 more than 50 000 hp employees already use sharepoint and that s just one company sharepoint 2007 enables businesses to share documents implement version controls intensify security and create workgroups all in real time all companies using ms exchange server will examine the latest iteration of sharepoint

The Routledge Handbook of Mass Media Ethics 2020-03-13

consumers today are in the focus of a wide range of companies in a more and more global world all of which implies an increase of marketing activities and hence an increase of advertising effort hundreds or even thousands of advertising messages are put in front of consumers every day through various media channels however every targeted customer has a very limited ability of perceiving advertising messages and even a smaller percentage of what has been recognized is considered as being relevant therefore consumers quite often feel harassed and overloaded by the mass of information the quality of advertising and the context in which it is shown and react protective towards advertising especially when they do not belong to the target group of the advertised product or service this implies a great amount of budget wastage and a potential damage to brand images since too many consumers are targeted with the wrong advertising message furthermore media consumption has changed over the years while the consumption of tv for instance remains stable the internet consumption increases dramatically in the younger target groups it has already outgrown the tv consumption and therefore an attenuation of this trend can be expected this means more and more prospective consumers will spend more and more time online and are therefore important potential targets for advertising campaigns keeping in mind the negative consequences of the irrelevant and too intense advertising the question arises if there is a way to avoid the drawbacks of

offline media and use the opportunities offered by online media the necessity of defining the right target group for an advertising campaign is as undoubted as the difficulties implied in that process the end product being able to target the right persons online behavioural targeting might offer a way to analyse online media and therefore to contribute to the requirements for optimal media planning in order to achieve a high degree

Design, User Experience, and Usability: Theory and Practice
