NORTH SO NORT examination of how the underlying technical structure of the internet affects the economic environment for innovation and the implications for public policy today following housing bubbles bank collapses and high unemployment the internet remains the most reliable mechanism for fostering innovation and creating new wealth the internet s remarkable growth has been fueled by innovation in this pathbreaking book barbara van schewick argues that this explosion of innovation is not an accident but a consequence of the internet's architecture a consequence of technical choices regarding the internet's inner structure that were made early in its history the internet s original architecture was based on four design principles modularity layering and two versions of the celebrated but often misunderstood end to end arguments but today the internet s architecture is changing in ways that deviate from the internet s original design principles removing the features that have fostered innovation and threatening the internet's ability to spur economic growth to improve democratic discourse and to provide a decentralized environment for social and cultural
