NEW WORLD PARROTS CRISIS 1992-01-17 the beautiful plumage of parrots and the ability to mimic sounds are both a blessing and a curse

Parrots 2012-09 from two experts on wild parrot cognition a close look at the intelligence social behavior and conservation of these widely threatened birds people form enduring emotional bonds with other animal species such as dogs cats and horses for the most part these are domesticated animals with one notable exception many people form close and supportive relationships with parrots even though these amusing and curious birds remain thoroughly wild creatures what enables this unique group of animals to form social bonds with people and what does this mean for their survival in thinking like a parrot alan b bond and judy diamond look beyond much of the standard work on captive parrots to the mischievous inquisitive and astonishingly vocal parrots of the wild focusing on the psychology and ecology of wild parrots bond and diamond document their distinctive social behavior sophisticated cognition and extraordinary vocal abilities also included are short vignettes field notes on the natural history and behavior of both rare and widely distributed species from the neotropical crimson fronted parakeet to new zealand's flightless ground dwelling kākāpō this composite approach makes clear that the behavior of captive parrots is grounded in the birds wild ecology and evolution revealing that parrots ability to bond with people is an evolutionary accident a by product of the intense sociality and flexible behavior that characterize their lives despite their adaptability and intelligence however nearly all large parrot species are rare threatened or endangered to successfully manage and restore these wild populations bond and diamond argue we must develop a fuller understanding of their biology and the complex set of ecological and behavioral traits that has led to their vulnerability spanning the global distribution of parrot species thinking like a parrot is rich with surprising insights into parrot intelligence flexibility and even in the face of threats resilience

Thinking Like a Parrot 2021-12-06 biology medicine and surgery of south american wild animals examines the medicine and treatment of animals specific to south america it discusses topics dealing with diseases and biology topics in addition the animals studied are broken down into family and genus using both english and spanish names the book is liberally illustrated and contains references for further reading as well as the contributions of regional experts on the animals covered

Passive Defense of Air Bases Against Biological and Chemical Attack 1956 in this book the editors bring together results from studies on all kinds of animals to show how thinking on many behaviors as truly cognitive processes can help us to understand the biology involved taking ideas and observations from the whole range of research into animal behavior leads to unexpected and stimulating ideas a space is created where the work of field ecologists evolutionary ecologists and experimental psychologists can interact and contribute to a greater understanding of complex animal behavior and to the development of a new and coherent field of study

Behavioural Biology Abstracts 1976 a current and cutting edge reference current therapy in avian medicine and surgery takes the popular current therapy approach in providing succinct and clear information pertinent to the medical care of avian species most chapters include an up to date delivery of the current state of knowledge on their subject material and provide practical

Biology, Medicine, and Surgery of South American Wild Animals 2008-08-06 can a parrot understand complex concepts and mean what it says since the early 1900s most studies on animal human communication have focused on great apes and a few cetacean species birds were rarely used in similar studies on the grounds that they were merely talented mimics that they were after all birdbrains experiments performed primarily on pigeons in skinner boxes demonstrated capacities inferior to those of mammals these results were thought to reflect the capacities of all birds despite evidence suggesting that species such as jays crows and parrots might be capable of more impressive cognitive feats twenty years ago irene pepperberg set out to discover whether the results of the pigeon studies necessarily meant that other birds particularly the large brained highly social parrots were incapable of mastering complex cognitive concepts and the rudiments of referential speech her investigation and the bird at its center a male grey parrot named alex have since become almost as well known as their primate equivalents and no less a subject of fierce debate in the field of animal cognition this book represents the long awaited synthesis of the studies constituting one of the landmark experiments in modern comparative psychology

Animal Cognition in Nature 1998-09-09 unlike any other book avian cognition thoroughly examines avian intelligence behavior and individuality preferences choices motivation and habits of species flocks and individual birds are discussed and compared this book investigates who birds are and why they do what they do daily seasonal and play activities creativity reasoning a Vocalizations and Vocal Behavior of Wild Breeding Puerto Rican Parrots (Amazona Vittata) 1989 some australian native birds become childhood sweethearts and court for years before they get married others divorce because of personality clashes and different skill levels many negotiate their parenting duties but how do these personal life events link to long lasting bonds long life spans and exceptional overall intelligence professor gisela kaplan an eminent voice in animal behaviour and particularly bird behaviour draws on the latest insights in the evolution of particular cognitive and social abilities she uncovers motivations and attractions in partner choice that are far more complex than was once believed she shows how humans and birds may be more alike in attachment and mating behaviour than we think despite the enormous evolutionary distance between us based on a wealth of original research and complemented by illustrations and colour photographs bird bonds is a valuable resource and a beguiling insight into the world of the birds around us

Custom Casebound Rebind of Biology 1998-03 in her comprehensive and carefully crafted book gisela kaplan demonstrates how intelligent and emotional australian birds can be she describes complex behaviours such as grieving deception problem solving and the use of tools many australian birds cooperate and defend each other and exceptional ones go fishing by throwing breadcrumbs in the water extract poisonous parts from prey and use tools to crack open eggshells and mussels the author brings together evidence of many such cognitive abilities suggesting plausible reasons for their appearance in australian birds bird minds is the first attempt to shine a critical and scientific light on the cognitive behaviour of australian land birds in this fascinating volume the author also presents recent changes in our understanding of the avian brain and links these to life histories and longevity following on from gisela's well received books on the australian magpie and the tawny frogmouth as well as two earlier titles on birds bird minds contends that the unique and often difficult conditions of australia's environment have been crucial for the evolution of unusual complexities in avian cognition and behaviour

Biology, the World of Life 1990 woody's last laugh explores a simmering controversy amid scientists conservationists birders and the media the supposed extinction of american ivory billed woodpecker among the first to identify rampant mental errors inside conservation and environmental professions the book identifies 53 distinct kinds of cognitive blunders psychological biases and logical fallacies on both sides of the woodpecker controversy few species have ever provoked such social rancor why are rumors of its persistence so prevalent unlike other near or recently extinct animals why are we so bad mannered with each other about a mere bird how is it that we cannot agree even on whether a mere bird is alive or dead woody's last laugh uncovers why such mysteries so mess with our heads by exploring uncharted borders between conservation and mental perception new ways of evaluating truth and accuracy are opened to everyone author dr j christopher haney is a biologist conservation scientist and lifelong birder for 12 years he was chief scientist at defenders of wildlife in 2010 following the deepwater horizon oil blowout the u.s. fish wildlife service invited him to lead the largest pelagic study of marine birds ever conducted in the gulf of mexico since 2013 he has been president of terra mar applied sciences an independent public interest conservation research firm which he founded if there is one lesson dr haney hopes his book delivers it is to not overvalue our thinking skills human reason is fallible even among scientists and technical experts to improve our essential relationship with nature conservation practices will need to devote as much attention to the unbridled thoughts as the unswerving sentiments dead or alive however the ivory bill got the last laugh on us all

Current Therapy in Avian Medicine and Surgery 2015-12-04 first published in 1988 during the past decade there has been a marked increase in the number of north american and european laboratories engaged in the study of social learning as a consequence evidence is rapidly accumulating that in animals as in humans social interaction plays an important role in facilitating development of adaptive patterns of behavior experimenters are isolated both by the phenomena they study and by the species with which they work the process of creating a coherent field out of the diversity of current social learning research is likely to be both long and difficult it the authors hope that the present volume may prove a useful first step in bringing order to a diverse field

The Alex Studies 2002-04-30 stray feathers showcases some of the remarkable adaptations of australian birds a brief introduction describes how evolution shapes form and function followed by a series of vignettes illustrating the wondrous variety of forms and functions shaped by evolution for example did you know that barn owls can hunt in absolute darkness and that cuckoos commence incubation before their egg is laid sections include anatomy and physiology the senses giving voice tongues talking plumage getting around finding and handling food optimising foraging and feeding reducing competition using tools communicating quality vs quantity courtship nests parental care chicks and living together the book is superbly illustrated with black and white drawings of a range of birds making it a worthy addition to the bookshelves of bird lovers everywhere

Avian Cognition 2016-01-27 for over 25 years primatologists have speculated that intelligence at least in monkeys and apes evolved as an adaptation to the complicated social milieu of hard won friendships and bitterly contested rivalries yet the balkanization of animal research has prevented us from studying the same problem in other large brained long lived animals such as hyenas and elephants bats and sperm whales social complexity turns out to be widespread indeed for example in many animal societies one individual s innovation such as tool use or a hunting technique may spread within the group thus creating a distinct culture as this collection of studies on a wide range of species shows animals develop a great variety of traditions which in turn affect fitness and survival the editors argue that future research into complex animal societies and intelligence will change the perception of animals as gene machines programmed to act in particular ways and perhaps elevate them to a status much closer to our own at a time when humans are perceived more biologically than ever before and animals as more cultural are we about to witness the dawn of a truly unified social science one with a distinctly cross specific perspective

Woody's Last Laugh 2021-11-26 papers by members of the royal society study group on non verbal communication

Social Learning 2013-12-16 communication is a basic behaviour found across animal species human language is often thought of as a unique system which separates humans from other animals this textbook serves as a guide to different types of communication and suggests that each is unique in its own way human verbal and nonverbal communication communication in nonhuman primates in

dogs and in birds research questions and findings from different perspectives are summarized and integrated to show students similarities and differences in the rich diversity of communicative behaviours a core topic is how young individuals proceed from not being able to communicate to reaching a state of competent communicators and the role of adults in this developmental process evolutionary aspects are also taken into consideration and ideas about the evolution of human language are examined the cross disciplinary nature of the book makes it useful for courses in linguistics biology sociology and psychology but it is also valuable reading for anyone interested in understanding communicative behaviour

Biology Digest 1984-04 animal welfare is attracting increasing interest worldwide especially in developed countries where the knowledge and resources are available to at least potentially provide better management systems for farm animals as well as companion zoo and laboratory animals the key requirements for adequate food water a suitable environment appropriate companionship and good health are important for animals kept for all of these purposes there has been increased attention given to farm animal welfare in many countries in recent years this derives largely from the fact that the relentless pursuit of financial reward and efficiency to satisfy market demands has led to the development of intensive animal production systems that challenge the conscience of many consumers in those countries in developing countries human survival is still a daily uncertainty so that provision for animal welfare has to be balanced against human needs animal welfare is usually a priority only if it supports the output of the animal be it food work clothing sport or companionship in principle the welfare needs of both humans and animals can be provided for in both developing and developed countries if resources are properly husbanded in reality however the inequitable division of the world's riches creates physical and psychological poverty for humans and animals alike in many parts of the world

Life Lore 1889 language did not evolve only in the distant past our shared understanding of the meanings of words is ever changing and we make conscious rational decisions about which words to use and what to mean by them every day applying charles darwin's theory of unconscious artificial selection to the evolution of linguistic conventions daniel cloud suggests a new evolutionary explanation for the rich complex and continually reinvented meanings of our words the choice of which words to use and in which sense to use them is both a selection event and an intentional decision making darwin's account of artificial selection a particularly compelling model of the evolution of words after drawing an analogy between the theory of domestication offered by darwin and the evolution of human languages and cultures cloud applies his analytical framework to the question of what makes humans unique and how they became that way he incorporates insights from david lewis's convention brian skyrms's signals and kim sterelny's evolved apprentice all while emphasizing the role of deliberate human choice in the crafting of language over time his clever and intuitive model casts humans cultural and linguistic evolution as an integrated dynamic process with results that reach into all corners of our private lives and public character
