2002-02

Encyclopedia of Geomagnetism and Paleomagnetism 2007-07-19 this reference encompasses the fields of geomagnetism and paleomagnetism in a single volume both sciences have applications in navigation in the search for minerals and hydrocarbons in dating rock sequences and in unraveling past geologic movements such as plate motions they have contributed to a better understanding of the earth the book describes in fine detail the current state of knowledge and provides an up to date synthesis of the most basic concepts it is an indispensable working tool not only for geophysicists and geophysics students but also for geologists physicists atmospheric and environmental scientists and engineers
Abstracts of Papers Presented to the American Mathematical Society 1981 this book features original research and recent advances in ICT fields related to sustainable development based the international conference on networks intelligent systems computing environmental informatics for sustainable development held in Marrakech in April 2020 it features peer reviewed chapters authored by prominent researchers from around the globe as such it is an invaluable resource for courses in computer science electrical engineering and urban sciences for sustainable development this book covered topics including green networks artificial intelligence for sustainability environment informatics computing technologies

Physics Briefs 1993 lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA scientific and technical information database

Emerging Trends in ICT for Sustainable Development 2021-01-23 3000

Mathematical Reviews 1995 towards smart world homes to cities using internet of things provides an overview of basic concepts from the rising of machines and communication to IoT for making cities smart real time applications domains related technologies and their possible solutions for handling relevant challenges this book highlights the utilization of IoT for making cities smart and its underlying technologies in real time application areas such as emergency departments intelligent traffic systems indoor and outdoor securities automotive industries environmental monitoring business entrepreneurship facial recognition and motion based object detection features the book covers the challenging issues related to sensors detection and tracking of moving objects and solutions to handle relevant challenges it contains the most recent research analysis in the domain of communications signal processing and computing sciences for facilitating smart homes buildings environmental conditions and cities it presents the readers with practical approaches and future direction for using IoT in smart cities and discusses how it deals with human dynamics the ecosystem and social objects and their relation it describes the latest technological advances in IoT and visual surveillance with their implementations this book is an ideal resource for IT professionals researchers undergraduate or postgraduate students practitioners and technology developers who are interested in gaining deeper knowledge and implementing IoT for smart cities real time applications areas and technologies and a possible set of solutions to handle relevant challenges Dr Lavanya Sharma is an assistant professor in the Amity Institute of Information Technology at Amity University, UP, Noida, India. She has been a recipient of several prestigious awards during her academic career. She is an active nationally recognized researcher who has published numerous papers in her field.

Scientific and Technical Aerospace Reports 1982 an account of the impact of space exploration on our understanding of the geology and geophysics of earth

2010-12

Towards Smart World 2020-12-13 this book is a comprehensive survey of all aspects and dimensions of higher education in Africa

Exploring Space, Exploring Earth 2002-08-15 includes supplements

2021

2005-09 a key source to journal and conference abbreviations in the sciences although it focuses on chemistry other scientific and engineering disciplines are also well represented in addition to the abbreviation and full title each entry also contains publishing info title changes language and frequency of publication and libraries owning that title over 130 000 entries representing more than 70 000 publications dating back to 1907 are included

African Higher Education 2003-10-02 this book describes the sound system of mono a banda language of the Democratic Republic of the Congo morphology and acoustic phonetics are discussed in order to inform the phonological analysis several interlinear texts and a wordlist are included notable features of the mono sound system include a phonemic bilabial flap with velarization an eight vowel system with fewer front vowels than back vowels a three level tone system that includes tonal morphemes a tonal melody on some locative adverbs and tonal polarity on morphologically complex prepositions labialization and palatalization realized as o and e respectively that can accompany among other segments h and ? echo vowel epenthesis causing a CV1 underlying syllable pattern to be realized as CV1LV1 prothetic augmentation of subminimal nominal roots including overapplication that results in a non surface apparent opacity effect and leftward vowel feature spreading subject to implicational restrictions Kenneth Olson received his Ph.D. in Linguistics in 2001 from the University of Chicago. He has worked with SIL since 1989 and has had an ongoing research program on the mono language since 1994. He has taught at the University of Oregon, the Faculté de théologie évangélique de Bangui, and the SIL

European training programme he is currently the associate international linguistics coordinator for sil and an adjunct associate professor at the University of North Dakota
