Soviet T-55 Main Battle Tank

2019-09-19

the t 55 is one of the most iconic weapons created by the soviets during the cold war and also one of the most widely deployed weapons in history like its younger brother the t 54 the t 55 enjoyed a long career in the red army and even into the early days of the reformed russian army under their control it saw very little combat use or deployments but it was widely sold to other nations and participated in many of the wars and combat operations from the mid 1960s to the present the t 55 has been employed in almost every conflict in the middle east and africa from its introduction into service even today the tank is still employed by both sides in the syrian civil war and they are also in service with kurdish forces in the struggle against isis in the northern part of iraq containing more than 400 stunning contemporary and modern photographs and written by two experts on soviet armour this authoritative book tells the complete story of the t 55 one of the most widely produced tanks of all time

The First Joint DoD/FAA/NASA Conference on Aging Aircraft

1998

this book presents the latest research in quantifying complex mixtures in the environment and analyzing their potential impact on human health many of the manuscripts reported in these proceedings represent the most up to date measurements of population exposures in central and eastern europe these studies are of value to health and environmental professionals around the world as they develop strategies for assessing exposures remediating contaminated environments and improving public health

long considered the bible of thoracic surgery this comprehensive text guides readers through open and endoscopic surgical techniques with expert commentary by the leaders in thoracic surgery coverage includes extensive sections on lung cancer and other pulmonary tumors includes access to a companion site

The Army Medical Bulletin

2000

the resilience of computing systems includes their dependability as well as their fault tolerance and security it defines the ability of a computing system to perform properly in the presence of various kinds of disturbances and to recover from any service degradation these properties are immensely important in a world where many aspects of our daily life depend on the correct reliable and secure operation of often large scale distributed computing systems wolter and her co editors grouped the 20 chapters from leading researchers into seven parts an introduction and motivating examples modeling techniques model driven prediction measurement and metrics testing techniques case studies and conclusions the core is formed by 12 technical papers which are framed by motivating real world examples and case studies thus illustrating the necessity and the application of the presented methods while the technical chapters are independent of each other and can be read in any order the reader will benefit more from the case studies if he or she reads them together with the related techniques the papers combine topics like modeling benchmarking testing performance evaluation and dependability and aim at academic and industrial researchers in these areas as well as graduate students and lecturers in related fields in this volume they will find a comprehensive overview of the state of the art in a field of continuously growing practical importance

Environmental Health in Central and Eastern Europe

2006-09-12

advances in neurosurgery presents the experience and research results of modern neurosurgeons confronted with urgent diagnostic and therapeutic problems the first topic here is spontaneous intracerebral hematomas whose localization determines the form of treatment and usually its outcome newer therapeutic approaches such as stereotactic removal endoscopy and fibrinolysis supplement the results of standard operative methods secondly the hydrocephalus malresorptivus is covered presenting experience with the diagnostic value of intrathecal infusion tests ct cisternography evoked potentials and mri csf flow studies as well as aspects of neurosurgical intensive care such as barbiturate treatment respiratory problems in head injury patients auto regulation mechanisms and hospital infection the last section is devoted to peripheral nerve surgery reports on experience with microsurgery and various forms of anastomosis in both traumatic and tumorous nerve lesions

Trade and Industry Publication

1970

this issue of radiologic clinics of north america focuses on cardiac ct imaging and is edited by drs suhny abbara and prabhakar rajiah articles will include calcium scoring for cardiovascular ct how when and why coronary cta acquisition interpretation and state of the evidence tavr and tcmvr cardiac masses nonischemic cardiomyopathies acute and chronic myocardial infarcts spectrum of manifestations pericardial disease relevant adult congenital heart disease congenital aortic disease cardiac valves excluding tavr acute coronary and acute aortic syndromes acquired aortic disease excluding acute aortic syndromes cardiac trauma post cardiovascular surgery findings and more

The US Army Signal School Apprenticeship Program for the Trade of Electrical Repairer

1979

this book offers the most up to date user friendly guidance on the evaluation diagnosis and medical and surgical treatment of heart and vascular disease the book and dvd package is designed to provide comprehensive coverage of every aspect of cardiovascular medicine the book has consistent chapter organization relevant to modern cardiovascular practice clear design and engaging text the reader will have all the guidance to diagnose and manage the full range of cardiovascular conditions in one textbook resource while also benefiting from access to additional video material from the integral dvd rom this includes over 100 individual heart sounds

General Thoracic Surgery

2009

tissue engineering is an emerging interdisciplinary field occupying a major position in the regenerative medicine that aims at restoring lost or damaged tissues and organs with use of cells regenerative medicine includes cellular therapy and tissue engineering in general the former treats patients by cell infusion alone while tissue engineering needs biomaterials and growth factors in addition to cells biomaterials function in tissue engineering as the scaffold or template for cells to proliferate

differentiate and produce matrices tissue engineering focuses on the fundamentals biomaterials scaffolds cell cultures bioreactors animal models etc recent animal and human trials and future prospects regarding tissue engineering almost twenty years have passed since the advent of the tissue engineering which uses cells scaffolds and growth factors for regeneration of neotissues the number of investigations on tissue engineering is still increasing tremendously nevertheless it seems likely that the number of reports describing clinical trials of tissue engineering will remain very limited even the studies that apply tissue engineering research to large animals have not been performed yet on a large scale the major objective of this book is to address this question from a science and technology point of view and to describe the principles of basic technologies that have currently been developed by numerous research groups helps reader understand the key issues required for promotion of clinical trials in tissue engineering covers in full the issues related to tissue engineering looking at current technologies in the field
