specific growing field to protect computer networks  
offline and online from unauthorized access botnets  
phishing scams etc machine learning is a branch of  
computer science which enables computing machines  
to adopt new behaviors on the basis of observable and  
verifiable data and information it can be applied to  
ensure the security of the computers and the  
information by detecting anomalies using data mining  
and other such techniques this book will be an  
invaluable resource to understand the importance of  
machine learning and data mining in establishing  
computer and cyber security it emphasizes important  
security aspects associated with computer and cyber

security along with the analysis of machine learning and data mining based solutions the book also highlights the future research domains in which these solutions can be applied furthermore it caters to the needs of it professionals researchers faculty members scientists graduate students research scholars and software developers who seek to carry out research and develop combating solutions in the area of cyber security using machine learning based approaches it is an extensive source of information for the readers belonging to the field of computer science and engineering and cyber security professionals key features this book contains examples and illustrations to demonstrate the principles algorithms challenges and applications of machine learning and data mining for computer and cyber security it showcases important security aspects and current trends in the field it provides an insight of the future research directions in the field contents of this book help to prepare the students for exercising better defense in terms of understanding the motivation of the attackers and how to deal with and mitigate the situation using machine learning based approaches in better manner
