Aviation Electrician's Mate 1 & C. 1971 volume 1 packaging is an authoritative reference source of practical information for the design or process engineer who must make informed day to day decisions about the materials and processes of microelectronic packaging its 117 articles offer the collective knowledge wisdom and judgement of 407 microelectronics packaging experts authors co authors and reviewers representing 192 companies universities laboratories and other organizations this is the inaugural volume of asmas all new electronic materials handbook series designed to be the metals handbook of electronics technology in over 65 years of publishing the metals handbook asm has developed a unique editorial method of compiling large technical reference books asmas access to leading materials technology experts enables to organize these books on an industry consensus basis behind every article is an author who is a top expert in its specific subject area this multi author approach ensures the best most timely information throughout individually selected panels of 5 and 6 peers review each article for technical accuracy generic point of view and completeness volumes in the electronic materials handbook series are multidisciplinary to reflect industry practice applied in integrating multiple technology disciplines necessary to any program in advanced electronics volume 1 packaging focusing on the middle level of the electronics technology size spectrum offers the greatest practical value to the largest and broadest group of users future volumes in the series will address topics on larger integrated electronic assemblies and smaller semiconductor materials and devices size levels

2012-06 covers a range of essential topics from a survey of important historical epidemics to study designs for infectious disease investigations the first part of the text covers id epidemiology background and methodology whereas the second focuses on specific diseases as examples of different transmission modalities tb hiv and influenza are among the pathogens discussed in great detail includes four new chapters on immunology measles meningococcal disease and vector borne infections the hiv chapter has been expanded to include issues of host genetics as well as a review of behavioral interventions

2019-10 this contemporary account of male fertility provides a much needed bridge between those seeking to understand the subject from an evolutionary and biological perspective and those with clinical responsibility for the investigation and treatment of infertility accordingly the first half of the book deals with the evolutionary aspects of male reproduction and sperm competition sperm production and delivery in man and other animals spermatogenesis and epididymal function sperm transport in the female tract and the apparent decline in human sperm count the second part of the book puts greater emphasis on clinical problems and opens with a discussion of intracytoplasmic sperm injection its value and limitations this is followed by a review of modern developments in the genetics of male fertility and proceeds to a further chapter on the role of surgical procedures used in the treatment semen analysis is critically reviewed and the molecular techniques now being used in preimplantation diagnosis and in the study of mitochondrial inheritance are fully described taken together these chapters written by an international team of authors illustrate the breadth of vision needed to tackle the problem of male fertility

2017-04-21 although bats and dolphins live in very different environments are vastly different in size and hunt different kinds of prey both groups have evolved similar sonar systems known as echolocation to locate food and navigate the skies and seas while much research has been conducted over the past thirty years on echolocation in bats and dolphins this volume is the first to compare what is known about echolocation in each group to point out what information is missing and to identify future areas of research echolocation in bats and dolphins consists of six sections mechanisms of echolocation signal production the anatomy and physiology of signal reception and interpretation performance and cognition ecological and evolutionary aspects of echolocation mammals theoretical and methodological topics and possible echolocation capabilities in other mammals including shrews seals and baleen whales animal behaviorists ecologists physiologists and both scientists and engineers who work in the field of bioacoustics will benefit from this book
