the first time i read the medical consent and authorization it had registered in my mind simply as a legal document now i began to understand what it meant it was a letter of ultimate love and trust schucking 1985 p 268 ever since karen ann quinlan slipped into permanent unconsciousness in 1975 and her father agonized publicly over whether she should remain indefinitely on a respirator in re quinlan 1976 the desires of patients their families and their friends to limit the application of apparently limitless medical technology have been a pressing concern for ethics law and public policy ms quinlan s case contained nearly all the elements of the problems we still face vague general but sincere prior oral statements suggesting that she would not want continued treatment a family attempting to do what they saw as best for her and physicians uncertain whether to use medical judgment alone and if so what the right medical decision was to preserve her life at all costs or to honor the family s interpretation of their daughter s choice most ironically once she was removed from her respirator she did not die karen quinlan like dozens of other names made famous by court decisions newspaper stories and television evening news has come to symbolize a tangled knot of issues surrounding the end of life and who controls it

modern medicine has put a new twist on one of our most fundamental values self determination a patient's right to self determination becomes a poignant and volatile issue in the context of modern life sustaining technologies when the benefit of medical treatment is overshadowed by the resulting burdens treatment may ethically be withdrawn patients have the right to make this decision assuming they still have the capacity to make it through advance directives a competent patient can extend his right to consent to or refuse medical treatment indefinitely into the future whether in the form of informal oral instructions or formal written documents advance directives insure patients that their treatment wishes will be carried out they also alleviate the uncertainty guilt and or fear of legal consequences facing the family and caregivers this volume is a collection of fourteen essays investigating the advantages and disadvantages of different kinds of directives the role of professionals in making and honoring them policy issues that need to be addressed and future directions which directives may take although such documents may be used to request treatment this volume limits its focus to their more common function the refusal of treatment timely and comprehensive advance directives in medicine provides a stimulating overview of this relevant topic the papers in this volume were originally presented at a multidisciplinary conference on advance directives revised and edited for this text they address a variety of questions and issues for instance what are the individual and societal benefits of advance directives does an advance directive tamper with the sanctity of life will normalizing directives have an adverse effect on the practice of medicine should a patient specify treatments to be withheld within a directive such as the use of cpr nutrition or hydration what legal sanctions should apply against those who ignore directives should directives be used to reduce health care expenditures by insurance companies medicare and medicaid what is a physician's role in helping his patient formulate an appropriate directive and when is a patient ready to confront his own mortality

Taking Advance Directives Seriously

in the quarter century since the landmark karen ann quinlan case an ethical legal and societal consensus supporting patients rights to refuse life sustaining treatment has become a cornerstone of bioethics patients now legally can write advance directives to govern their treatment decisions at a time of future incapacity yet in clinical practice their wishes often are ignored examining the tension between incompetent patients prior wishes and their current best interests as well as other challenges to advance directives robert s olick offers a comprehensive argument for favoring advance instructions during the dying process he clarifies widespread confusion about the moral and legal weight of advance directives and he prescribes changes in law policy and practice that would not only ensure that directives count in the care of the dying but also would define narrow instances when directives should not be followed olick also presents and develops an original theory of prospective autonomy that recasts and strengthens patient and family control while focusing largely on philosophical issues the book devotes substantial attention to legal and policy questions and includes case studies throughout an important resource for medical ethicists lawyers physicians nurses health care professionals and patients rights advocates it champions the practical ethical and humane duty of taking advance directives seriously where it matters most at the bedside of dying patients

Freedom of information in a post 9/11 world is to date the first international scholarly examination of the impact of the terrorist attack on the United States in terms of how it may alter academic and corporate research as well as the sharing of information generated by that research. By international colleagues in technological fields, the collection of essays brings together a widely varied panel of communications experts from different backgrounds and cultures to focus their expertise on the ramifications of this world-changing event. Drawing upon the related but separate disciplines of law, interpersonal communication, semiotics, rhetoric, management, information sciences, and education, the collection adds new insight to the potential future challenges high-tech professionals and academics will face in a global community that now seems much less communal than it did prior to September 11, 2001. In freedom to choose how to make end-of-life decisions on your own terms, young persons, baby boomers, and senior citizens alike will find the information they need to make intelligent, informed, and well-planned decisions about end-of-life care and to clearly state their wishes based on personal, cultural, religious, and family values in direct and simple language. Dr. Burnell describes how to prepare for a smooth transition to end-of-life care and what to do to prevent family conflicts, overcome death fears, and anxiety, and achieve peace of mind for our loved ones and ourselves. The book gives practical advice on how to make decisions about end-of-life care and how to prepare a living will and durable power of attorney for health care. Dr. Burnell provides guidelines at the end of each chapter on what to consider before preparing these important documents: how to preserve one's rights as a patient, how to choose the right doctor, the best place to be when critically ill, the laws governing advance directives, and the best alternatives for end-of-life care such as good pain control and assisted dying where this is legal. Freedom to choose provides a user-friendly approach to facing these difficult decisions. It includes extensive lists of resources and organizations and a glossary necessary for understanding the issues at hand. As this book makes clear, preparing an advance directive and knowing all the available options at the end of life are the most important steps for achieving peace of mind. The primary audience is anyone young or old who needs to prepare a set of advance directives for themselves or their loved ones who are seriously ill or on life support, and people with a terminal illness. The secondary audience is health professionals who deal with people in end-of-life care or with decision makers on end-of-life issues: primary care physicians, nurses, geriatricians, psychiatrists, hospice doctors, nurses, and volunteer staff, caregivers for the seriously ill, oncologists, interns, and residents, counselors, family therapists, psychologists, social workers who work with the dying and bereaved, attorneys, thanatologists, estate planning advisors, senior citizen center staff, college teachers in death and dying courses, professionals taking courses in psychology, gerontology, thanatology, nursing, and social work.
