employing her original concept of the ontoipoiesis of life the author uncovers the intrinsic law of the primogenital logos that which operates in the working of the indivisible dyad of impetus and equipoise this is the crucial intrinsically motivated device of logic constructivism this key instrument is engaged is at play at every stage of the advance of life in a feat unprecedented in the history of western philosophy the emergence and unfolding of the entire orbit of the human universe is shown to bear out this insight furthermore the intrinsic rhythms of impetus and equipoise are taken as a guide in uncovering the workings of the logos all at once in contrast to the piecemeal exposition of a single line of argument in a schema covering the entire career of beingness in becoming between the infinities of origin and destiny an historically unprecedented harmonizing all sectors of rationality is accomplished in a span of reflection comparable to spinoza s ethics the work draws on interdisciplinary investigations in both science and the arts all of the history of occidental philosophy finds summary in it even as feelers guidelines leitmotifs are thrown out for its future development a landmark of occidental philosophy at the turn of the millennium

whatever forces may govern human life if they are to be recognised by man must betray themselves in human experience progress in science or religion no less than in morals and art is a dramatic episode in man s career a welcome variation in his habit and state of mind although this variation may often regard or propitiate things external adjustment to which may be important for his welfare the importance of these external things as well as their existence he can establish only by the function and utility which a recognition of them may have in his life the entire history of progress is a moral drama a tale man might unfold in a great autobiography could his myriad heads and countless scintillas of consciousness conspire like the seventy alexandrian sages in a single version of the truth committed to each for interpretation what themes would prevail in such an examination of heart in what order and with what emphasis would they be recounted in which of its adventures would the human race reviewing its whole experience acknowledge a progress and a gain to answer these questions as they may be answered speculatively and provisionally by an individual is the purpose of the following work

this book is about overcoming obstacles when a life disrupter strikes it s common to search for reasons and formulas to obtain control of the uncontrollable the author is convinced that a satisfying life lies on the other side of asking why a life at the intersection of sorrow and joy beyond the need to control outcomes a recent cancer recurrence propelled sheri blackmon into surgical failures setbacks and a search for a way forward her disrupter evoked dormant childhood trauma that obscured and complicated the process of moving toward acceptance this memoir is not only a cancer story but also a story of a girl torn between two continents as a missionary child whose mother is a holocaust survivor it explores universal themes of loss abuse control dislocation being an outsider and finding one s voice it offers an honest christian reflection on discovering one s footing and purpose within a framework of five discernible steps toward acceptance while presented in five steps acceptance of what is lost is not a linear process with a beginning and an end but a lifelong engagement of the heart

thanks to new improving experimental techniques modern biology is discovering a steadily growing body of new facts and data about the living nature a good example of this advancement is the decryption of the complete genome of a rapidly increasing number of organisms including humans regardless of these impressive results however there are still no satisfying answers to very basic questions of biology such as what is life and why does matter organize into biological forms that become more complex in the course of evolution the interaction theory by michael j ruf assumes that this unsatisfying situation is not simply the consequence that certain experimental data are still missing the lack of explanation of what life is actually and why simple molecules evolve into complex organisms rather reflects an existing conceptual problem that can only be solved with a radically new conceptual approach interaction theory is the result of such a radically new approach to life and evolution in contrast to conventional evolutionary theory the generation sequences of living forms are considered to be the decisive quality of life by clarifying how the continuation of these generation sequences can be sustainable over billions of years new fundamental principles become obvious and the phenomenon of an increasing biological complexity understandable as a result a law like process of biological complexity increase can be derived as immanent part of the evolution of life this allows interaction theory to provide new answers to key questions such as why sexual reproduction what species are and what life is the theory is however not limited to cells and organisms and their evolution it addresses the self organization to higher complexity of all kinds of structures that are subject to an evolution through multiplication processes this means that interaction theory also provides an understanding of why and how molecular networks social communities and even societies become more complex over time
