of people and their physical surroundings july 5 8 1988 in delft the netherlands recent years have witnessed a surge in public awareness concerning the impact of world economic forces on cities in this challenging book the author argues that though the consciousness is new the phenomena themselves are not for the past two centuries at least world economic political and cultural forces have been major factors shaping cities patterns of urbanization and the physical and spatial forms of the built environment anthony king believes that the historical context of contemporary global restructuring must be recognized if present day urban and regional change is to be properly understood he explores and documents the cultural and spatial links between metropolitan core and colonial periphery and examines the historical foundations of the world urban system he also looks at the social production of building and urban form and demonstrates their potential for understanding economic political socail and cultural change on a global scale the books in this set originally published between 1968 and 1992 introduce the reader to the many lines of thought in the literature on economic geography construction or being considered this dynamic trend was enabled by developments in the material itself prefabrication and more flexibility in fire regulations the low co2 footprint of wood often regionally sourced is another strong argument in its favour this publication explains the typical construction types such as panel systems frame and hybrid systems an international selection of 13
