with more than 25 photos and 3 maps in these gripping battlefield memoirs of Lt Col Weston he recounts his experiences of the bloody fighting that the New Zealanders experienced fighting in Europe during the First World War. The author sailed from his home in New Plymouth in 1915 as an ex-cadet he volunteered for active service his destination was to be Egypt as thence to the hellish conditions of Gallipoli he fought side by side with his men of the Wellington Battalion until the eventual evacuation of all the allied forces little respite was allowed to the author and the other ANZACs who had survived Gallipoli as they were pitched into the fighting on the Western Front during the Battle of the Somme in 1916 and then again in the fierce battles of Messines La Bassée and Passchendaele by this point Weston had been promoted Lieutenant but was wounded by artillery fire at Ypres in 1917 his war was at an end being invalided from the service with full honours.

In recent years a series of major collections of posthumous writings by Elizabeth Bishop one of the most widely read and discussed poets of the twentieth century have been published. Profoundly affecting how we look at her life and work the hundreds of letters poems and other writings in these volumes have expanded Bishop's published work by well over a thousand pages and placed before the public a new Bishop whose complexity was previously familiar to only a small circle of scholars and devoted readers. This collection of essays by many of the leading figures in Bishop studies provides a deep and multifaceted account of the impact of these new editions and how they both enlarge and complicate our understanding of Bishop as a cultural icon.

Covering the theory application and testing of contact materials, *Electrical Contacts Principles and Applications*, Second Edition introduces a thorough discussion on making electric contact and contact interface. Conduction presents a general outline of and measurement techniques for important corrosion mechanisms. Considers the results of contact wear when plug-in connections are made and broken. Investigates the effect of thin noble metal plating on electronic connections and relates crucial considerations for making high and low power contact joints. It examines contact use in switching devices including the interruption of AC and DC circuits with currents in the range 10mA to 100kA and circuits up to 1000V and describes arc formation between open contacts and between opening contacts. Arcing effects on contacts such as erosion welding and contamination are also addressed. Containing nearly 3000 references, tables, equations, figures, drawings and photographs the book provides practical examples encompassing everything from electronic circuits to high power circuits or microamperes to mega amperes. The new edition reflects the latest advances in electrical contact science and technology. Examines current research on contact corrosion.
