does the inheritance of acquired characteristics play a significant role in evolution in this book eva jablonka and marion j lamb attempt to answer that question with an original provocative exploration of the nature and origin of hereditary variations starting with a historical account of lamarck s ideas and the reasons they have fallen in disrepute the authors go on to challenge the prevailing assumption that all heritable variation is random and the result of variation in dna base sequences they also detail recent breakthroughs in our understanding of the molecular mechanisms underlying inheritance including several pathways not envisioned by classical population genetics and argue that these advances need to be more fully incorporated into mainstream evolutionary theory throughout the book offers a new look at the evidence for and against the heritability of environmentally induced changes and addresses timely questions about the importance of non mendelian inheritance a glossary and extensive list of references round out the book urging a reconsideration of the present dna centric view prevalent in the field epigenetic inheritance and evolution will make fascinating and important reading for students and researchers in evolution genetics ecology molecular biology developmental biology and the history and philosophy of science

good women should not claim a share in the inheritance even if they have no brothers notions such as this have in their own way and over time given the women in the santal parganas the resolve to wrest what is rightfully theirs this is a powerful book in the way in which it unfolds the lives and anxieties of santal women in two villages of dumka district jharkhand from the very inception adivasi women come alive through separate life histories they span different situations and social patterns but all of them relate to rights in landed property and their own troubled identities in the backdrop of harsh living conditions social discrimination and lack of state support land for the santal women is not a mere economic resource it stands for security social position and identity and in this men have

a distinct advantage soon after writing in a personal vein the author unfolds how these anxieties of the santal women resonate her own the author traces the relationship between santals and their land from historic times to the modern era when they have access to both the modern legal system and their own customary laws she also examines the role of external agencies in this struggle government administrative bodies non governmental organizations and political leaders as modern influences crowd out traditional mores the author asserts that development is not always a benign process of social advancement but a highly political struggle for re negotiating power relations between men and women and among social groups the use of a community identity as adivasis has also been responsible for denying women rights to land in the context of the movement for political autonomy of jharkhand based on rich ethnographic material this sensitive book lays bare the reality of being an adivasi and an adivasi woman in all its nuances in the modern globalized world

Epigenetic Inheritance and Evolution 1995

object oriented inheritance has been in widespread use for a decade and it is now realised that although inheritance is a powerful modelling tool with many associated advantages its benefits are not automatically conferred on systems that simply use it inheritance relationships each relationship has a clear conceptual basis representing a fundamental specialised use of inheritance the resulting model replaces a confused notion of inheritance with five distinct conceptual relationships supporting more precise modelling of systems and capturing the semantic intent of each use of inheritance within a system

every storyteller soon discovers the difference between putting a story inside children and trying to extract it with comprehension questions and putting children inside a story and having them act it out teachers may experience this as a difference in difficulty or in the level of motivation and enthusiasm or even in the engagement of creativity and imagination and leave it at that this book explores the divide more critically and analytically finding symmetrical and even complementary problems and affordances with both approaches first we examine what teachers actually say and do in each approach using the systemic functional grammar of m a k halliday secondly we explore the differences developmentally using the cultural historical psychology of l s vygotsky thirdly we explain the differences we find in texts by considering the history of genres from the fable through the plays of shakespeare inside and outside the story turn out to be two very different modes of experiencing the one reflective and narrativizing and the other participatory and dialogic these two modes of experience prove to be equally valuable and even mutually necessary but only in the long run different approaches are necessary at different moments in the lesson different points in development and even different times in human history in the final analysis though this distinction is meaningless to children and to their teachers unless it is of practical use each chapter employs only the most advanced technology ever developed for making sense of human experience namely thinking and talking though not necessarily in that order so every story has a specific narrative to tell a concrete set of dialogues to try and above all a practicable time and a practical space for children their teachers and even their teachers teachers to

first published in 1986 in the age of the computer conjecture about things mechanical has naturally led to the question of whether machines can think as the emphasis on artificial intelligence ai has grown rapidly questions about machine intelligence have begun to have a certain urgency the question we are concerned with in this book is if we can find a set of processes that machines can slavishly follow and if by so doing these machines can come up with creative thoughts what would that tell us about human beings if the machine s procedure was adapted from a human procedure that is if all the machine was doing was what we know people are doing would we abandon our inherent skepticism about the abilities of machines or would we demystify our inherent admiration for things human in a sense these are the issues dealt with in this book the author says in a sense because this book is no way a philosophical treatise rather it is an exercise in artificial intelligence and in cognitive science it is an attempt to come to understand one of the most complex problems of mind by examining some of the mechanisms of mind to define the apparatus that underlies our ability to think
