Animals in Our Midst: The Challenges of Co-existing with Animals in the Anthropocene 2021-04-29 there isn t one conversation about animal ethics instead there are several important ones that are scattered across many disciplines this volume both surveys the field of animal ethics and draws professional philosophers graduate students and undergraduates more deeply into the discussions that are happening outside of philosophy departments to that end the volume contains more nonphilosophers than philosophers explicitly inviting scholars from other fields such as animal science ecology economics psychology law environmental science and applied biology among others to bring their own disciplinary resources to bear on matters that affect animals the

routledge handbook of animal ethics is composed of 24 chapters all appearing in print here for the first time and organized into the following six sections i thinking about animals ii animal agriculture

been written in a way that is accessible to serious undergraduate
students regardless of their field of study the volume covers
everything from animal cognition to the state of current fisheries
from genetic modification to intersection animal activism it is a
resource designed for anyone interested in the moral issues that
emerge from human interactions with animals

Agroforestry Systems 1990 reprint of the original first published in
1883

Agroforestry, June 1986 - November 1989 1990 the great
apes gorillas chimpanzees bonobos and orangutans are known to
be our closest living relatives chimpanzees in particular share 98
percent of our dna and scientists widely agree that they exhibit
intellectual abilities long thought to be unique to humans such as
self awareness and the ability to interpret the moods and identify
the needs of others the close relation of apes to humans raises
important ethical questions are they better protected in the wild
or in zoos should they be used in biomedical research should they
be afforded the same legal protections as humans great apes and
humans is the first book to present a spectrum of viewpoints on
human responsibilities toward great apes a variety of field
biologists academic scientists zoo professionals psychologists
sociologists ethicists and legal scholars consider apes in both the
wild and captivity they present sobering statistics on the declining
numbers of wild apes specifically discussing the decimation of
great ape populations due to wild game consumption they explore
the role of apes in the educational missions of zoos as well as the
need for sanctuaries for wild ape orphans and former research
subjects after examining the social division between apes and
humans from historical evolutionary and cognitive perspectives
they conclude by reviewing the current moral and legal status of
great apes as well as how apes cognitive skills inform these issues
although this provocative book contains many different opinions
the uniting concern of the contributors is the safety and well
being of great apes only by continuing the dialogue so clearly
presented here can we hope to ensure their future
