this book analyses the doctrinal structure and content of secondary liability rules that hold internet service providers liable for the conduct of others including the safe harbours or immunities of which they may take advantage and the range of remedies that can be secured against such providers many such claims involve intellectual property infringement but the treatment extends beyond that field of law because there are few formal international standards which govern the question of secondary liability comprehension of the international landscape requires treatment of a broad range of national approaches this book thus canvasses numerous jurisdictions across several continents but presents these comparative studies thematically to highlight evolving commonalities and trans border commercial practices that exist despite the lack of hard

international law the analysis presented in this book allows exploration not only of contemporary debates about the appropriate policy levers through which to regulate intermediaries but also about the conceptual character of secondary liability rules
