

Free download The physics of radiation therapy Copy

radiation therapy radiotherapy 2023-04-20 radiation therapy also called radiotherapy is a type of cancer treatment this treatment uses beams of intense energy to kill cancer cells radiation therapy most often uses x rays but other types of radiation therapy exist including proton radiation modern methods of radiation are precise

radiation therapy or radiotherapy rt rtx or xrt is a treatment using ionizing radiation generally provided as part of cancer therapy to either kill or control the growth of malignant cells it is normally delivered by a linear particle accelerator

radiation therapy remains an important component of cancer treatment with approximately 50 of all cancer patients receiving radiation therapy during their course of illness it contributes towards 40 of curative treatment for cancer the main goal of radiation therapy is to deprive cancer cells of their multiplication cell division

more than 14 million new cases of cancer are diagnosed globally each year radiation therapy rt has the potential to improve the rates of cure of 3 5 million people and provide palliative relief for an additional 3 5 million people

radiation therapy is the use of directed x rays or subatomic particles primarily for cancer management in both curative and palliative settings it can be delivered either externally or internally
