US Army and Marine Corps MRAPs

2013-11-20

the mine resistant ambush protected mrap vehicle is the newest land warfare system in the united states army and marine corps inventory designed to meet the challenges of operating in a counterinsurgency environment the mrap has taken survivability to a new level mraps are currently manufactured by three companies bae systems navistar international military group and force protection inc each company manufactures an mrap according to one of three classifications set by the us department of defense category i category ii or category iii the category i mraps are designed for urban combat category ii covers the mraps designed for convoy security medical evacuation and explosive ordnance disposal the category iii mrap performs the same function as category ii but is designed to carry more personnel since their introduction in 2007 mraps have performed remarkably in the asymmetric warfare environment their unique design and survivability characteristics have saved the lives hundreds of soldiers who otherwise would have been lost to landmines or ied attacks as with any combat system however the mrap is not without its drawbacks

Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles

2010-08-30

technologies and approaches to reducing the fuel consumption of medium and heavy duty vehicles evaluates various technologies and methods that could improve the fuel economy of medium and heavy duty vehicles such as tractor trailers transit buses and work trucks the book also recommends approaches that federal agencies could use to regulate these vehicles fuel consumption currently there are no fuel consumption standards for such vehicles which account for about 26 percent of the transportation fuel used in the u s the miles per gallon measure used to regulate the fuel economy of passenger cars is not appropriate for medium and heavy duty vehicles which are designed above all to carry loads efficiently instead any regulation of medium and heavy duty vehicles should use a metric that reflects the efficiency with which a vehicle moves goods or passengers such as gallons per ton mile a unit that reflects the amount of fuel a vehicle would use to carry a ton of goods one mile this is called load specific fuel consumption lsfc the book estimates the improvements that various technologies could achieve over the next decade in seven vehicle types for example using advanced diesel engines in tractor trailers could lower their fuel consumption by up to 20 percent by 2020 and improved aerodynamics could yield an 11 percent reduction hybrid powertrains could lower the fuel consumption of vehicles that stop frequently such as garbage trucks and transit buses by as much 35 percent in the same time frame
