Education, Knowledge, and Economic Growth 2003

the debate concerning the role of knowledge in the economic growth process has gained considerable attention both because of the importance of its implications in terms of economic policy and due to the number of theoretical and empirical analyses it has engendered thus the argument according to which endogenous growth models explain long term economic growth is often put forward it is held that the production of knowledge induces self maintained economic growth however in spite of numerous theoretical developments attempts at empirical verification have run up against serious methodological difficulties the first and most serious stumbling block is the way in which an intangible good of incommensurable size such as knowledge is evaluated moreover most of the empirical studies carried out in recent years have taken the form of cross national comparisons designed to analyse the role of different socio economic factors in growth so far however they have not succeeded in making conclusive statements of whether or not knowledge can induce long term economic growth taking this state of research into consideration the main objective of the present volume is to re examine by way of new techniques of quantitative analysis theoretical models developed with a view to ascertaining the endogenous nature of economic growth induced by the production

seminar paper from the year 2019 in the subject politics political theory and the history of ideas journal grade 1 0 free university of berlin otto suhr institut language english abstract the question that this paper will aim to answer is how can the cases of the mwasi and lallab collectives and their perception in france be analyzed through the lens of the theory of intersectionality this theory seems particularly fit for this research paper as its arrival in french academia has challenged the more traditional universal feminism in a lot of different ways in the last fifteen years moreover both collectives define themselves as intersectional feminist groups and advocate for taking into account the particular experiences of women the first part of this paper details the development of the theory of intersectionality in the united states before looking at the particular case of france and studying some of the reasons that have made its acceptance difficult the second part focuses on the mwasi collective detailing its mission and actions before going over its perception in france in particular with the case of the nyansapo festival organized in 2017, similarly

dating from 1908 in this work poincaré applied the concept of limit cycle which he had introduced in 1882 through his own works to study the stability of the oscillations of a device for radio engineering the discovery of this text means that the classical perspective of the historiography of this mathematical theory must be modified credit was hitherto attributed to the russian mathematician andronov from correspondence dating to 1929 in the newly discovered poincaré text there appears to be a strong interaction between science and technology or more precisely between mathematical analysis and radio engineering this feature is one of the main components of the process of developing the theory of nonlinear oscillations indeed it is a feature of many of the texts referred to in these chapters as they trace the significant developments to which france contributed scholars in the fields of the history of mathematics and the history of science and anyone with an interest in the philosophical underpinnings of science will find this a particularly engaging account of scientific discovery and scholarly communication from an era full of exciting developments

until the close of the nineteenth century french colonial theory was based on the idea of assimilation which gave france the responsibility for civilizing its colonies by absorbing them administratively and culturally by the turn of the twentieth century this idea had given way to the theory of association which held that france s new empire could be better served by a more flexible policy in which the colonized become partners with france in the colonial project raymond f betts examines the pivotal shift in colonial theory within the metropole the debate that it generated and its intellectual origins a landmark book in the field of french colonial theory assimilation and association in french colonial theory 1890 1914 has served as the central point of reference for every major colonial historian during the four decades since its original publication in 1961 available in paperback for the first time with a new preface by the author this edition will interest all students of colonialism and introduce many younger scholars to what remains the best and most original book in the field raymond f betts is a professor of history emeritus at the university of kentucky and an expert in modern european imperialism his many books include decolonization and a history of popular culture more of everything faster and brighter

understanding policy analysis in france requires first a thorough exploration of the distinction usually made in french academic and practitioner debates between policy studies and policy analysis essentially the difference between studies of policy and studies designed for the use of policy this book begins there then delves into questions of how and by whom knowledge of policies is produced within and outside the french state showing that while the tension between the two types of study is real the continued exchange of ideas between them has led to an enrichment of both spheres the book thus lays the foundation for a more systematic understanding of policy analysis in france

nadir lahiji constructs a concept of the baroque in contrast to the contemporary understanding in architecture discourse challenging the contemporary dominance of the neo baroque as a phenomenon related to postmodernism and late capitalism he establishes the baroque as a name for the paradoxical unity of kitsch and high art and argues that the digital turn has enhanced the return of the baroque in contemporary culture and architectural practice that he brands a pseudo event in the term neobaroque lahiji s original critique expands on the misadventure of architecture with french philosophy and explains why the category of the baroque if it is still useful to keep in architecture criticism must be tied to the notion of post rationalism within this latter notion he draws on the work of alain badiou to theorize a new concept of the baroque as event alongside close readings of walter benjamin theodor adorno and michel foucault related to the criticism of the baroque and modernity and discussions of the work of frank gehry in particular this study draws on jacque lacan s concept of the baroque and presents the first comprehensive treatment of the psychoanalytical theory of the baroque in the work of lacan
