also many newer lines of research to which i will return below are represented in various chapters and finally i have included a separate unit on methods for the study of aggression a feature that i believe to be unique to the present volume in these ways i have attempted to produce a text that is as broad and eclectic in coverage as i could make it while the present volume grew in part out of my desire to produce what i thought might prove to be a useful teaching aid it also developed out of a second major motive during the past few years a large number of new and to me exciting lines of investigation have emerged in rapid order these have been extremely varied in scope including among many others such diverse topics as the effects of sexual arousal upon aggression the impact of environmental factors e g heat noise crowding upon such behavior interracial aggression and the influence of heightened self awareness despite the fact that such topics have already generated a considerable amount of research they were not to my knowledge adequately represented in any existing volume given this state of affairs it seemed to me that a reasonably comprehensive summary of this newer work might prove both useful and timely

in recent years a great deal has been written on the topic of aggression another book on the same topic might seem superfluous at this time however the present volume is not just or even primarily about aggression it is rather a book on anger anger and aggression are

closely related phenomena and it is not possible to discuss one without the other yet not all anger is aggressive nor can all aggression be attributed to anger therefore somewhat different considerations apply to each even more importantly the type of theoretical generalizations one can make differs depending upon whether the primary focus is on anger or aggression the present volume is subtitled an essay on emotion this indicates that the generalizations to be drawn have more to do with emotional responses e g grief love envy etc than with various forms of aggression e g riots war crimes of violence etc stated somewhat differently anger is here being used as a paradigm case for the study of emotion not for the study of aggression
