this book introduces the concept of using drones as a teaching tool to explore the fundamental principles technology and applications of cyber physical systems cps a short introduction sets cps in the context of the 4th industrial revolution and describes various cps technologies including self driving cars commercial intelligent drones and mobile robots in which artificial intelligence routinely supports smarter decision making the core of

the book then focuses on commercially available drones the only available system offering the advantage of cyber physical bridging through 3d autonomous dynamic flying in classroom conditions chapters describe drone technology including location sensors and imaging systems cps theory is explained through typical drone flying procedures and do it yourself diy aerial photography in which communication between sensors actuators and controllers occurs through cyber physical bi directional bridging this book opens new possibilities in fostering 4th industrial revolution literacy introducing relevant examples from readily available equipment making core elements of cyber physical bridging accessible it is aimed primarily at those students who have an interest in cps drones and those from disciplines that are concerned with spatial information

this book is a revision of the author s original doctoral thesis on emergency preparedness through community radio in north indian villages into a widening array of possible reapplications in other community development fields the author expands on the process of transforming emergency preparedness education through community media in rural north india and applies this to the development of community prosperity defined simply as human and planetary well being anywhere in the world a new theoretical framework is presented which combines the pivotal integral worlds approach developed by lessem and schieffer with critical theory thus exploring a new way to envision and implement social change leading to innovation and social transformation this book introduces the term constructive resilience which is a type of community building that occurs alongside dominant societal structures that are either oppressive or ineffective an evolving field of study and practice it is emerging from the work of academics and community builders who are members of the bahá í faith bahá í consultation a process of inquiry and decision making is offered as a systematic and effective method of defining problems and enacting solutions and is examined in the context of emergency preparedness education and local capacity building with its integral development approach its unique combination of themes and theoretical components and integration with the bahá í faith as well as its interdisciplinary nature this book will be invaluable reading for researchers in many fields it will be of particular interest in university based training programs in disaster management and the various disciplines of international community development as well as practitioners in the areas of micro enterprise disaster management community development rural communications rural economics and emergency preparedness education

the natural environment is complex and changes continuously at varying paces many like the weather we notice from day to day however patterns and rhythms examined over time give us the bigger picture these weather

statistics become climate and help us build an understanding of the patterns of change over the long term real time environmental monitoring sensors and systems introduces the fundamentals of environmental monitoring based on electronic sensors instruments and systems that allow real time and long term data acquisition data logging and telemetry the book details state of the art technology using a practical approach and includes applications to many environmental and ecological systems in the first part of the book the author develops a story of how starting with sensors you can progressively build more complex instruments leading to entire systems that end with databases and web servers in the second part he covers a variety of sensors and systems employed to measure environmental variables in air water soils vegetation canopies and wildlife observation and tracking this is an emerging area that is very important to some aspects of environmental assessment and compliance monitoring real time monitoring approaches can facilitate the cost effective collection of data over time and to some extent negate the need for sample collection handling and transport to a laboratory either on site or off site it provides the tools you need to develop employ and maintain environmental monitors

the millimeter wave frequency band 30 300 ghz is considered a potential candidate to host very high data rate communications first used for high capacity radio links and then for broadband indoor wireless networks the interest in this frequency band has increased as it is proposed to accommodate future 5g mobile communication systems the large bandwidth available will enable a number of new uses for 5g in addition due to the large propagation attenuation this frequency band may provide some additional advantages regarding frequency reuse and communication security however a number of issues have to be addressed to make mm wave communications viable this book collects a number of contributions that present solutions to these challenges
