2013-05-01

the landing vehicle tracked lvt was a class of amphibious warfare vehicle a small landing craft introduced by the united states navy marine corps and army during world war ii originally intended solely as cargo carriers for ship to shore operations they rapidly evolved into assault troop and fire support vehicles as well the lvt mark i was the first military model traveling at a respectable six knots in the water and twelve mph on land it could deliver twenty four fully equipped assault troops to the beach though it was only intended for delivering supplies inland until wheeled vehicles could be brought ashore the lvt could supply supporting fire from two 30 cal m1919 browning machine guns many lvts were refitted prior to the tarawa landing to hold two 50 cal browning heavy machine guns forward with the 30 cal guns aft the vehicle was not armored and its thin steel hull offered virtually no protection although prior to tarawa some vehicles received nine mm of armor plating to the cab the lvt s tracks performed well on sand but not on tough surfaces the rigid suspension threw tracks and roller bearings corroded in salt water proper maintenance of the new machine was often an issue as few marines were trained to work on it and early models suffered frequent breakdowns the lvt mark ii featured new powertrain and torsilastic suspension the aluminium track grousers were bolted on making changes much easier since they wore out quickly on land and more so on coral hard terrain performance was much better compared to the lvt mark i created in 1944 this technical manual reveals a great deal about the lvt s design and capabilities intended as a manual for those charged with operation and maintenance it details many aspects of its engine cooling fuel powertrain and other systems originally labeled restricted this manual was declassified long ago and is here reprinted in book form care has been taken to preserve the integrity of the text

1945

Inchon was probably the most significant campaign in the Korean theater as well as being the last major amphibious assault of division size conducted in the history of warfare. The odds were stacked against the US troops with virtually no time for training and many of the divisions unprepared for the conflict. The success of the Inchon campaign is a testament to the sheer initiative of the officers and NCOs who conducted it. This book details the strategy and tactics that led to the operation's success as well as narrating the experience of the battle in fascinating detail.

## ***The Sicilian Campaign, 10 July-17 August 1943***

1945

The entry of the US into World War II provided the Allies with the industrial might to finally take the war to German and Japanese forces across the world. Central to this was the focus of the American military industrial complex on the manufacture of tanks and armored fighting vehicles between 1939 and 1945. 88,140 tanks and 18,620 other armored vehicles were built, almost twice the number that Germany and Great Britain combined were able to supply. In this lavishly illustrated volume, armor expert Michael Green examines the dizzying array of machinery fielded by the US Army from the famed M4 Sherman, M3 Stuart, and M3 Lee through to the half-tracks, armored cars, self-propelled artillery, tank destroyers, armored recovery vehicles, and tracked landing vehicles that provided the armored fist that the Allies needed to break Axis resistance in Europe and the Pacific. Publishing in paperback for the first time and packed with historical and contemporary color photography, this encyclopedic new study details the design, development, and construction of these vehicles, their deployment in battle, and the impact that they had on the outcome of the war.

## ***The Aleutians Campaign, June 1942-August 1943***

1945

Over the Beach, written by historian and retired Army Colonel Donald W. Boose Jr., is the definitive history of the extensive but little-known US Army amphibious operations during the Korean War, 1950-1953. Building on its extensive experience in World War II, the Army conducted three major landing operations during the war, including the assault at Inchon in September 1950. After the massive Chinese attacks two months later, the Army executed a series of amphibious withdrawals as it fell back to more defensible positions farther down the peninsula. Throughout the war, the Army also conducted a number of massive and complex over-the-shore logistical operations as well as several amphibious special operations along the Korean littoral. Colonel Boose's work, commissioned by the DAMO ODG Operations and Technology Office, provides the historical context for any subsequent amphibious operations on the Korean peninsula, as such, this thought-provoking study may provide insights to modern planners crafting future joint or combined operations in that part of the world. Publisher's description.
