strategic alliances have emerged as an important element of firms strategies following suit research on alliances has blossomed concentrating on the various forms alliances take the reasons of their existence and increasingly embracing questions of alliance management and governance tasks however most contributions which address the alliance governance problem are yet rather vague and selective in their conception of alliance governance structures as well as the

factors which influence their suitability the aim of this book is to further advance our understanding of alliance governance and to provide recommendations on the problem of alliance governance design following the configurational approach sascha albers develops a comprehensive model of alliance governance systems he identifies relevant structural and instrumental design parameters and analyzes major contingency factors including member firms cultures and alliance experience number of alliance partners and trust which impact the design parameters suitability he finally deduces five configurations or ideal types of alliance governance systems which can be regarded as blueprints for the practitioner and as platform for further research for the alliance scholar potential readership includes scholars of strategic management and organization theory interested students in these areas as well as practitioners involved in formulating and implementing alliance strategies

this volume's primary contribution to the field of economics is that it addresses the issue of inter linkages between money finance and macroeconomics with a broad analytical perspective that has commonality with the post keynesians in an attempt to assess the consequences of economic reforms and the fallout of the global financial crisis on india and the world around the book argues that with the onset of the crisis as in most advanced economies debates and discussions in india have been concerned with three main issues monetary policy and asset prices financial stability and macro prudential regulation three related issues which are also considered important in the indian context are rule vs principle based supervision integrated financial supervision and regulatory and supervisory independence the book argues that the crisis highlighted the inadequacies of macro prudential regulatory structure which mainly addresses idiosyncratic risks specific to individual financial institutions the crisis precipitated an extensive debate on the role of national regulatory and supervisory authorities in crisis prevention and crisis management via macro prudential regulations which involves a general equilibrium approach to regulation aiming at safeguarding the financial system as a whole the book then argues that the crisis led to a paradigm shift in macroeconomic theory and policy this shift has been categorized into four specific areas monetary policy financial regulation corporate governance and globalization the book analyses how the characteristics of each of these four categories have changed from the pre crisis to the post crisis situation the book also delves into the phenomenon of rising global commodity prices post crisis the book also deals with an analysis of the impact of this crisis on employment in the us economy by simulating a macroeconomic model developed by the cambridge department of applied economics in the 1980s
