almost fifty years ago j j butler started his research to trace the possible remains of a bronze age metalworker s workshop in the netherlands yet while metalworking has been deduced on the ground of the existence of regional types of axes and some scarce finds related to metalworking the smith s workplace has remained elusive in this research master thesis i have tried to tackle this problem i have considered both the social as well as the technological aspects of metalworking to be able to determine conclusively whether metalworking took place in the netherlands or not the first part of the thesis revolves around the social position of the smith and the social organization of metalworking my approach entails a re evaluation of the current theories on metalworking which i believe to be unfounded and one sided they tend to disregard production of everyday objects of which the most prominent example is the axe the second part deals with the technological aspects of metalworking and how these processes are manifested in the archaeological record based on evidence from archaeological sites elsewhere in europe and with the aid of experimental archaeology a metalworking toolkit is constructed finally a method is presented which might help archaeologists recognize the workplace of a bronze age smith

measurements of solar irradiance both bolometric and at various wavelengths over the last two decades have established conclusively that the solar energy flux varies on a wide range of time scales from minutes to the 11 year solar cycle the major question is how the solar variability influences the terrestrial climate the solar electromagnetic radiation study for solar cycle 22 solers22 is an international research program operating under the auspices of the solar terrestrial energy program step working group 1 the sun as a source of energy and disturbances step is sponsored by the scientific committee of solar terrestrial physics scostep of the international council of scientific unions icsu the main goal of the solers22 1996 workshop was to bring the international research community together to review the most recent results obtained from observations theoretical interpretation empirical and physical models of the variations in the solar energy flux and their possible impact on climate studies these questions are essential for researchers and graduate students in solar terrestrial physics

the early medieval crannog in loch glashan was excavated in 1960 by jack scott in advance of dam construction the crannog produced a rich organic assemblage of wood and leather objects as well as exotic items such as continental imported pottery and a brooch studded with amber this title examines all the evidence from the crannog

Fermilab Report

1985

although much has been written on the aesthetic value of color there are other values that adhere to it with economic and social values among them through case studies of particular colors and colored objects this volume demonstrates just how complex the history of color is by focusing on the diverse social and cultural meanings of color the trouble pain and suffering behind the production and application of these colors the difficult technical processes for making and applying color and the intricacy of commercial exchanges and knowledge transfers as commodities and techniques moved from one region to another by emphasizing color s materiality the way in which it was produced exchanged and used by artisans artists and craftspersons contributors draw attention to the disjuncture between the beauty of color and the blood sweat and tears that went into its production circulation and application as well as to the complicated and varied social meanings attached to color within specific historical and social contexts this book captures color s global history with chapters on indigo

plantations in india and the american south cochineal production in colonial oaxaca the taste for brightly colored chinese objects in europe and the thriving trade in vermilion between europeans and native americans to underscore the complexity of the technical knowledge behind color production there are chapters on the discovery of prussian blue brazilian feather techn and wallpaper production to sound the depths of color s capacity for social and cultural meaning making there are chapters that explore the significance of black ink in shakespeare s sonnets red threads in women s needlework samplers blues in mayan sacred statuary and greens and yellows in colored glass bracelets that were traded across the arabian desert in the late middle ages the purpose of this book is to recover color s complex and sometimes morally troubling past and in doing so

Air Force Magazine

2011

an exciting introduction to astronomy the fourth edition of this book uses recent discoveries and stunning photography to inspire non science majors about the universe written by two highly experienced and engaging instructors each chapter has been fully updated with more than 200 new images throughout including recent images from space missions and the world s best observatories the newly redesigned text is organized as a series of stories each presenting the history of the field the observations made and how they fit within the process of science our current understanding and what future observations are planned math is provided in boxes and easily read around making the book suitable for courses taking either mathematical or qualitative approaches new discussion questions encourage students to think widely about astronomy and the role science plays in our everyday lives and podcasts for each chapter aid studying and comprehension
