**Advisory Committee. Fuel resources, requirements and costs for electric generation in eastern United States, report of the Fossil Fuel Resources Committee** 1983 a preface is an excellent opportunity for an editor to speak directly to the reader and share with him the goals hopes struggles and production of a volume such as this it seems to me that i have an important obligation to tell you the origins of this volume this is no idle chatter but rather an integral part of scientific inquiry it is important before delving into content theory and methodology to talk about motivation values and goals indeed it is always necessary to explicate from the very beginning of any intellectual and scientific inquiry the implicit assumptions governing that exercise failure to do so is not only an ethical but a scientific failure we learn albeit all too slowly that science is a moral enterprise and that values must be explicitly stated removing from the shadows those implicit beliefs that often motivate and determine our results no better or more relevant example can be found than in the review of the implicit assumptions of the early iq psychometricians in this country see kamin's book the science and politics of iq 1975
