method is intended for the sophomore junior level
student seeking to be well grounded in mathematical
modeling for their studies in biology the physical
sciences engineering and or medicine it clarifies the
connection between deductive and inductive reasoning as
used in mathematics and science and urges students to
think critically about concepts and applications the
authors goal is to be introductory in level while
covering a broad range of techniques they unite topics
in statistics linear algebra calculus and differential
equations while discussing how these subjects are
interrelated and utilized mathematical modeling for the
scientific method leaves students with a clearer
perspective of the role of mathematics within the
sciences and the understanding of how to rationally
work through even rigorous applications with ease this
