How to Repair and Maintain Your Apple Computer 1985 explains how to identify problems in the computer disk drive monitor power supply or printer and demonstrates basic repair and maintenance techniques

How to Repair and Maintain Your Apple Computer 1985 from the global geopolitical arena to the smart city control over knowledge particularly over data and intellectual property has become a key battleground for the exercise of economic and political power for companies and governments alike control over knowledge what scholar susan strange calls the knowledge structure has become a goal unto itself the rising dominance of the knowledge structure is leading to a massive redistribution of power including from individuals to companies and states strong intellectual property rights have concentrated economic benefits in a smaller number of hands while the internet of things is reshaping basic notions of property ownership and control in the scramble to create and control data and intellectual property governments and companies alike are engaging in ever more surveillance the new knowledge is a guide to and analysis of these changes and of the emerging phenomenon of the knowledge driven society it highlights how the pursuit of the control over knowledge has become its own ideology with its own set of experts drawn from those with the ability to collect and manipulate digital data haggart and tusikov propose a workable path forward knowledge decommodification to ensure that our new knowledge is not treated simply as a commodity to be bought and sold but as a way to meet the needs of the individuals and communities that create this knowledge in the first place

iPhone: The Missing Manual 2020-09-08 innovation is the hottest buzzword in business but what if our obsession with finding the next big thing has distracted us from the work that matters most the most important book i ve read in a long time it explains so much about what is wrong with our technology our economy and the world and gives a simple recipe for how to fix it focus on understanding what it takes for your products and services to last tim o reilly founder of o reilly media it s hard to avoid innovation these days nearly every product gets marketed as being disruptive whether it s genuinely a new invention or just a new toothbrush but in this manifesto on thestate of american work historians of technology lee vinsel and andrew l russell argue that our way of thinking about and pursuing innovation has made us poorer less safe and ironically less innovative drawing on years of original research and reporting the innovation delusion shows how the ideology of change for its own sake has proved a disaster corporations have spent millions hiring chief innovation officers while their core businesses tank computer science programs have drilled their students on programming and design even though theoverwhelming majority of jobs are in it and maintenance in countless cities suburban sprawl has left local governments with loads of deferred repairs that they can t afford to fix and sometimes innovation even kills like in 2018 when a miami bridge hailed for its innovative design collapsed onto a highway and killed six people in this provocative deeply researched book vinsel and russell tell the story of how we devalued the work that underpins modern life and in doing so wrecked our economy and public infrastructure while lining the pockets of consultants who combine the ego of silicon valley with the worst of wall street s greed the authors offer a compelling plan for how we can shift our focus away from
