what is the best way to promote human rights in grossly repressive states when neither sanctions nor trade and investment have much effect this book examines the concept of principled engagement as an often overlooked alternative strategy for alleviating human rights violations and improving the framework of human rights protection beginning with an explanation of the concept and a comparison with the alternatives of ostracism and business as usual the book argues that principled engagement deserves greater attention and explains how it works and what factors contribute to its success or failure case studies provide a rare scholarly inquiry into the effectiveness of the basic underlying ideas and analyse and assess specific cases including from china burma zimbabwe and liberia written by leading academics and practitioners the book takes a general comparative approach to human rights policy that teases out broad lessons about what works ultimately this is a study that challenges scholars and practitioners alike to take a fresh look at how human rights are promoted internationally

the book analyses the position of the ecthr which has

been more and more confronted with criticism coming from the national sphere including the judiciary this culminated in constitutional court judgments declaring a particular ectr judgment non executable for reasons of constitutional law existing scholarship does not differentiate enough between cases of mere political unwillingness to execute an ectr judgment and cases where execution is blocked for legal reasons mainly of constitutional law nature at the same time the discussion under eu law on national constitutional identity limiting the reach of the former has been only loosely linked with the echr context this book presents a new dogmatic concept principled resistance to analyse such cases taking up examples from the national level it strives to find out whether the legal reasoning behind principled resistance shows enough commonalities in order to qualify such incidents as expression of a new paradigm

in this illuminating volume robert p abelson delves into the too often dismissed problems of interpreting quantitative data and then presenting them in the context of a coherent story about one s research unlike too many books on statistics this is a remarkably engaging read filled with fascinating real life and real research examples rather than with recipes for analysis it will be of true interest and lasting value to beginning graduate students and seasoned researchers alike the focus of the book is that the purpose of statistics is to organize a useful argument from quantitative evidence using a form of principled rhetoric five criteria described by the acronym magic magnitude articulation generality interestingness and credibility are proposed as crucial features of a persuasive principled argument particular statistical methods are discussed with minimum use of formulas and heavy data sets the ideas throughout the book revolve around elementary probability theory t tests and simple issues of research design it is therefore assumed that the reader has already had some access to elementary statistics many examples are included to explain the connection of statistics to substantive claims about real phenomena

metaheuristics and evolutionary algorithms in particular are known to provide efficient adaptable solutions for many real world problems but the often informal way in which they are defined and applied has led to misconceptions and even successful applications are sometimes the outcome of trial and error ideally theoretical studies should explain when and why metaheuristics work but the challenge is huge mathematical analysis requires significant effort even for simple scenarios and real life problems are usually quite complex in this book the editors establish a bridge between theory and practice presenting principled methods that incorporate problem knowledge in evolutionary algorithms and other metaheuristics the book consists of 11 chapters dealing with the following topics theoretical results that show what is not possible an assessment of unsuccessful lines of empirical research methods for rigorously defining the appropriate scope of problems while acknowledging the compromise between the class of problems to which a search algorithm is applied and its overall expected performance the top down principled design of search

algorithms in particular showing that it is possible to design algorithms that are provably good for some rigorously defined classes and finally principled practice that is reasoned and systematic approaches to setting up experiments metaheuristic adaptation to specific problems and setting parameters with contributions by some of the leading researchers in this domain this book will be of significant value to scientists practitioners and graduate students in the areas of evolutionary computing metaheuristics and computational intelligence

moral philosophy has long been dominated by the aim of understanding morality and the virtues in terms of principles however the underlying assumption that this is the best approach has received almost no defence and has been attacked by particularists who argue that the traditional link between morality and principles is little more than an unwarranted prejudice in principled ethics michael ridge and sean mckeever meet the particularist challenge head on and defend a distinctive view they call generalism as a regulative ideal after cataloguing the wide array of views that have gone under the heading particularism they explain

why the main particularist arguments fail to establish their conclusions the authors generalism incorporates what is most insightful in particularism e g the possibility that reasons are context sensitive holism about reasons while rejecting every major particularist doctrine at the same time they avoid the excesses of hyper generalist views according to which moral thought is constituted by allegiance to a particular principle or set of principles instead they argue that insofar as moral knowledge and practical wisdom are possible we both can and should codify all of morality in a manageable set of principles even if we are not yet in possession of those principles moral theory is in this sense a work in progress nor is the availability of a principled codification of morality an idle curiosity ridge and mckeever also argue that principles have an important role to play in guiding the virtuous agent

this book explores mexico s foreign policy using the principled pragmatism approach it describes and explains main external actions from the country s independence in the nineteenth century to andrés manuel lópez obrador s administration the principal argument is that mexico has resorted to principled pragmatism due to geographic historical economic security and political reasons in other words the nation uses this instrument to deal with the united states defend national interests appease domestic groups and promote economic growth the key characteristics of mexico s principled pragmatism in foreign policy are that the nation projects a double edged diplomacy to cope with external and domestic challenges at the same time this

policy is mainly for domestic consumption and it is also linked to the type of actors that are involved in the decision making process and to the kind of topics included in the agenda this principled pragmatism is related to the nature of the intention principism is deliberate and pragmatism is forced and this policy is used to increase Mexico's international bargaining power

what is good government why do some governments fail how do you implement political accountability in practice what incentives do you need to put in place to ensure that politicians and public servants act in the public interest and not their own these questions and many more are addressed in timothy besley s intriguing lindahl lectures economic analyses of government usually divide into two broad camps one which emphasizes government as a force for public good that can regulate markets distribute resources and generally work towards improving the lives of its citizens the other sees government as driven by private interests susceptible to those with the power to influence its decisions and failing to incentivize its officials to act for the greater public good this book adopts a middle way between the two extremes the publicus approach which recognizes the potential for government to act for the public good but also accepts the fact that things often go wrong it shares the view that there are certain institutional preconditions for effective government but then proceed to examine exactly what those preconditions are timothy besley emphasises that it is not just about designing an appropriate institutional framework but also about understanding the way incentives work and the process by which the political class is selected

commencing its search for a principled international criminal justice this book argues that the preamble to the rome statute requires a very different notion of justice than that which would be expected in domestic jurisdictions this thinking necessitates theorising what international criminal justice requires in terms of its legitimacy much more than normative invocations which in their unreality can endanger the satisfaction of two central concerns the punitive and the harm minimisation dimensions the authors suggest that because of the unique nature and form of the four global crimes pre existing proof technologies are failing prosecutors and judges forcing the development of an often unsustainable line of judicial reasoning the empirical focus of the book is to look at jce joint criminal enterprise and aiding and abetting as case studies in the distortion of proof tests the

substantial harm focus of icj international criminal justice invites applying compatible proof technologies from tort causation aggregation and participation the book concludes by examining recent developments in corporate criminal liability and criminalising associations radically asserting that even in harmonising hybridising international criminal law there resides a new and rational vision for the juridical project of international criminal justice
