*Teaching Adults* 1997 lifelong learning addresses situations in which a learner faces a series of different learning tasks providing the opportunity for synergy among them explanation based neural network learning ebnn is a machine learning algorithm that transfers knowledge across multiple learning tasks when faced with a new learning task ebnn exploits domain knowledge accumulated in previous learning tasks to guide generalization in the new one as a result ebnn generalizes more accurately from less data than comparable methods explanation based neural network learning a lifelong learning approach describes the basic ebnn paradigm and investigates it in the context of supervised learning reinforcement learning robotics and chess the paradigm of lifelong learning using earlier learned knowledge to improve subsequent learning is a promising direction for a new generation of machine learning algorithms given the need for more accurate learning methods it is difficult to imagine a future for machine learning that does not include this paradigm from the foreword by tom m mitchell

**Explanation-Based Neural Network Learning** 2011-10-17 scientific study from the year 2016 in the subject computer science miscellaneous grade 1 post graduate government college language english abstract every natural language contains a large number of words these words can have different senses in different context such words with multiple senses are known as sense tagged words word sense reflects the basic concept of the word and the words with several meanings cause ambiguity in the sentence and the process that decides which of the denotation is accurate in the sentence among several meanings of the word is known as word sense disambiguation human beings are good at understanding the meaning of the word by reading the sentence but the same task is difficult for a machine to understand and accurately sense the correct meaning of the word machines can easily understand the set of rules and it is a difficult task to create such rules that can easily disambiguate the word in the context this task is complicated because every natural language has their own set of rules such as grammatical rules part of speech antonymy and synonym therefore a machine is trained by special algorithm so that it can tag the word with its correct sense if the correct sense of the word is determined that correct sense is helpful in retrieving the basic concepts of the word as such this is very difficult task for a machine to retrieve the basic definition of word in this proposed work k nearest neighbor knn approach is used to disambiguate the sense tagged words the knn is based on supervised learning method the proposed technique evaluates the performance on hindi sense tagged words and these are obtained from hindi wordnet the results show the effectiveness of the proposed technique in sense tagged words

**BUNDLE: Levine: Child Development 3e + Levine, Child Develop** 2017-08-02 target recognition is an important aspect of air traffic management but the study on automatic aircraft identification is still in the exploratory stage rapid aircraft processing and accurate aircraft type recognition remain challenging tasks due to the high speed movement of the aircraft against complex backgrounds active learning as a promising research topic of machine learning in recent decades can use less labeled data to obtain the same model accuracy as supervised learning which greatly reduces the cost of labeling a dataset

**Java 6 Illuminated** 2008-02-12 programming languages an active learning approach introduces students to three programming paradigms object oriented imperative languages using c and ruby functional languages using standard ml and logic programming using prolog this interactive textbook is intended to be used in and outside of class each chapter follows a pattern of presenting a topic followed by a practice exercise or exercises that encourage students to try what they have just read this textbook is best suited for students with a 2 3 course introduction to imperative programming key features 1 accessible structure guides the student through various programming languages 2 seamlessly integrated practice exercises 3 classroom tested 4 online support materials advance praise the programming languages book market is overflowing with books but none like this in many ways it is precisely the book i have been searching for to use in my own programming languages course one of the main challenges i perpetually face is how to teach students to program in functional and logical languages but also how to teach them about compilers this book melds the two approaches very well david musicant carleton college
