the purpose of the soil mechanics experiment s 200 was to obtain data on the characteristics and mechanical behavior of the lunar soil at the surface and subsurface and the variation of its properties in lateral and vertical directions on slopes and between different regions of the moon

## **apollo soil mechanics experiment s 200 nasa technical *Nov 09 2022***

apollo soil mechanics experiment s 200 the physical and mechanical properties of the unconsolidated lunar surface material samples that were obtained during the apollo missions were studied sources of data useful for deduction of soil information and methods used to obtained the data are indicated a model for lunar soil behavior is described

## ***4 soil mechanics experiment nasa Oct 08 2022***

particular interest to the soil mechanics experiment were new to the apollo 14 mission the apollo imple penetrometer and the soil mechanics trcncht and the mach of these has been used to shed new light on lunar soil characteristics and each is discussed in detail in this section although the analyses and results presented in

## **nasa nssdca experiment details *Sep 07 2022***

the soil mechanics experiment was designed to obtain data on the characteristics and mechanical behavior of the lunar soil at the surface and subsurface and the variation of these properties in a lateral direction
