proper airway management is essential for safe anesthesia in cats general anesthesia is associated with a loss of protective airway reflexes and respiratory depression general anesthesia is an essential component of feline practice without which surgery and certain other treatment modalities and diagnostic procedures would be impossible these feline focused guidelines are vital to cat health data and empirical experience have shown that cats undergoing anesthesia continue to have an increased mortality rate compared with dogs 1 2 these guidelines address specific causes of this disparity and ways of avoiding perioperative complications associated with monitoring airway management fluid therapy and recovery at home the continuum begins with the pet owner administering prophylactic drugs like analgesics and anxiolytics as well as fasting the pet in the hospital the anesthesia continuum includes all of the following four phases of anesthesia preanesthesia induction maintenance and recovery safe and effective anesthesia of dogs and cats rely on preanesthetic patient assessment and preparation patients should be premedicated with drugs that provide sedation and analgesia prior to anesthetic induction with drugs that allow endotracheal the aaha anesthesia and monitoring guidelines for dogs and cats offer veterinary professionals a comprehensive and up to date resource for optimizing anesthesia practices key points include personalized approach tailor anesthesia plans to the individual needs of each patient ensuring a safe and effective experience during surgical procedures the overarching purpose of the aafp anesthesia guidelines hereafter referred to as the guidelines is to make anesthesia and sedation safer for the feline patient procedural sedation and analgesia psa describes the process of depressing a patient's conscious state to perform unpleasant minimally invasive procedures and is part of the daily routine in feline medicine maintaining cardiopulmonary stability is critical while performing psa clinical challenges feline anesthesia and pain management offers a definitive and practical guide to feline anesthesia and pain management the only book offering detailed practical information on anesthesia and pain management in cats one of the world's most popular pets show all table of contents export citation's free access front matter pages i xx the american association of feline practitioners has released the first feline specific anesthesia guidelines which appeared in the july 1 issue of the journal of feline medicine and surgery j feline med surg 2018 20 602 634 understanding feline anesthesia and what it entails can help you be better prepared if your cat ever needs anesthesia key takeaways your veterinarian may recommend anesthesia to make the procedure safer and less stressful for both your cat and members of the veterinary team with the publication and validation of multiple feline specific pain scales veterinarians in both practice and academia are rightly paying close attention to the provision of appropriate analgesia to feline patients two recently fda approved products are now available for use in cats canine feline anesthesia lyon lee dvm phd dacva canine anesthesia introduction a general anesthetic to a healthy dog should bear little risk to the animal's life however although the mortality rate is very low morbidity due to anesthesia which is often overlooked is not uncommon in this article we'll discuss more about the use of anesthesia in cats when it may be recommended as well as potential risks and precautions associated with it an animal's depth of anesthesia is determined by evaluating reflexes muscle tone and response of vital signs to surgical stimulation if an animal is judged to be too light for the surgical procedure being performed an increased amount of anesthetic is administered all surgical procedures anesthetics analgesics antibiotics or other medications used on animals must be approved by the iacuc described in the animal use protocol and performed by personnel listed on the protocol and appropriately trained for the surgical procedure anesthesia is used to help in treatment to improve the cat's quality of life and prevent or end suffering yet despite the effectiveness of anesthesia some studies report that approximately 0 11 of healthy cats die of an anesthetic related death and other studies cite results of 0 24 and higher risk factors include increased age and non following these guidelines can help prevent some of the most common side effects and complications that affect cats during and after anesthesia an optimal recovery time within 10 30 min of the end of anesthesia for dogs and cats will depend on the patient health status type of anesthetic technique used i e inhalant versus injectable duration of anesthesia and body temperature anesthetics fluids and emergency drugs can be administered through the iv line intravenous fluids help maintain blood pressure in the anesthetized patient and replace lost fluids due to evaporation from body cavity surfaces through bleeding and in any tissues that are being removed
