The Bible Text Cyclopedica 1878 moral values are real we don t just make them up beauty is in the world it s not just in the eye of the beholder you are free what you do is not always determined by electrochemical processes in your brain and the universe we live in is god s creation these are radical claims but they are widely rejected in contemporary philosophy because they are almost always considered in relative isolation from one another this book shows that when they are considered in conjunction they gain mutual support and it shows this both clearly and concisely but its systematic approach to philosophy also reveals that various philosophical positions currently widely accepted and defended can appear plausible and perhaps even compelling only when they are considered in relative isolation as they too almost always are when the issues on which these positions are taken are considered in conjunction problems come into view and the alternative positions defended in this book emerge as superior toward a philosophical theory of everything is a ground breaking work that shows the importance of systematic thinking while also defending positions on central philosophical issues that are widely rejected in contemporary philosophy

Logic: A Complete Introduction: Teach Yourself 2014 find out what connects logic and humor in this alternative guide to logical reasoning combining jokes stories and ironic situations stan baronett shows how it is possible to ground the language of logic in everyday experience each chapter introduces a basic logical reasoning concept based on happenings in daily life using jokes as his examples baronett reveals the inner workings of logic after all an effective joke often relies on an unanticipated assumption that leads to an unexpected result the assumption changes the normal context of an everyday situation so we are surprised by the ending a complex mind that learns from experience and builds a storehouse of regularly recurring patterns is a great survival tool but for a joke to work the punch line has to be something our minds don t logically anticipate the ending jolts our minds for a split second while we grasp the absurdity of the situation this is how logic works one part of your mind determines whether the information you are receiving is true or false while another part of your mind deals with logical consequences injecting a sense of humor into logical language baronett helps us understand how to analyze basic logical reasoning and provides light relief for anyone daunted by the complex world of logic
