Future Trends, Breakthroughs and Innovation in HRM *2007*

data mining is the process of posing queries and extracting useful information patterns and trends previously unknown from large quantities of data thu 00 it is the process where intelligent tools are applied in order to extract data patterns jm 01 this encompasses a number of different technical approaches such as cluster analysis learning classification and association rules and finding dependencies agents are defined as software entities that perform some set of tasks on behalf of users with some degree of autonomy this research work deals about developing a automated data mining system which encompasses the familiar data mining algorithms using intelligent agents in object oriented databases and proposing a framework because the data mining system

uses the intelligent agents a new user will be able to interact with the data mining system without much data mining technical knowledge this system will automatically select the appropriate data mining technique and select the necessary field needed from the database at the appropriate time without expecting the users to specify the specific technique and the parameters also a new framework is proposed for incorporating intelligent agents with automated data mining one of the major goals in developing this system is to give the control to the computer for learning automatically by using intelligent agents
