the launch of sputnik in 1957 not only began the space age it also showed that soviet rockets were more powerful than american ones within months the us air force hired rocketdyne for a feasibility study of an engine capable of delivering at least 1 million pounds of thrust later nasa ran the development of this f 1 engine in order to use it to power the first stage of the saturn v rocket that would send apollo missions to the moon it is no exaggeration to say that without the f 1 engine nasa would not have been able to achieve president kennedy s 1961 challenge to his nation to land a man on the moon before the decade was out

this revised edition of taylor s classic work on the internal combustion engine incorporates changes and additions in engine design and control that have been brought on by the world petroleum crisis the subsequent emphasis on fuel economy and the legal restraints on air pollution the fundamentals and

the topical organization however remain the same the analytic rather than merely descriptive treatment of actual engine cycles the exhaustive studies of air capacity heat flow friction and the effects of cylinder size and the emphasis on application have been preserved these are the basic qualities that have made Taylor's work indispensable to more than one generation of engineers and designers of internal combustion engines as well as to teachers and graduate students in the fields of power internal combustion engineering and general machine design

the venerable jeep 4 0 liter inline six engine has powered millions of jeeps including cjs yjs wranglers cherokees and wagoneers the 4 0 delivers adequate horsepower from the factory but many off road drivers want more horsepower and torque to conquer challenging terrain which means these engines are often built and modified the jeep 4 0 or 242 ci is affordable abundant exceptionally durable and many consider it one of the best 4x4 off road engines in this workbench title veteran author and chrysler jeep engine expert larry shepard covers the rebuild of an entire engine in exceptional detail he also delves into popular high performance modifications and build ups step by step photos and captions cover each crucial step of the engine disassembly he shows the inspection of all critical parts including block heads rotating assembly intake and exhaust critical machining processes are covered such as decking the block line boring and overboring the block the book provides exceptional detail during the step by step assembly so your engine is strong and reliable installing a larger displacement rotating

assembly or stroker package is one of the most cost effective ways to increase performance and the author covers a stroker package installation in detail with millions of jeep 4 0 engines in the marketplace which are subjected to extreme use many of these engines require a rebuild in addition many owners want to extract more torque and horsepower from their 4 0 engines so these engine are also modified until now there has not been a complete and authoritative guide that covers the engine rebuild and build up process from beginning to end jeep 4 0 engines is the essential guide for an at home mechanic to perform a professional caliber rebuild or a high performance build up

when the mighty rocketdyne f 1 engine was conceived in the late 1950s for the u s air force it had no defined mission and there was no launch vehicle it could power it was a bold concept to push the technological envelope of rocket propulsion in order to put massive payloads into earth orbit few realized at the time that the f 1 would one day propel american astronauts to the moon in the saturn v f 1 engine anthony young tells the amazing story of unbridled vision bold engineering explosive failures during testing unrelenting persistence to find solutions and ultimate success in launching the saturn v with a 100 percent success rate the book contains personal interviews with many rocketdyne and nasa personnel involved in the engine s design development testing and production is lavishly illustrated with black and white and color photographs many never previously published is the first complete history of the most powerful rocket engine ever built the f 1 engine remains the high point in u s liquid rocket propulsion it represents a period in american history when nothing was impossible

interactive operations research with maple methods and models has two objectives to provide an accelerated introduction to the computer algebra system maple and more importantly to demonstrate maple s usefulness in modeling and solving a wide range of operations research or problems this book is written in a format that makes it suitable for a one semester course in operations research management science or quantitative methods a number of students in the departments of operations research management science operations management industrial and systems engineering applied mathematics and advanced mba students who are specializing in quantitative methods or operations management will find this text useful experienced researchers and practitioners of operations research who wish to acquire a quick overview of

how maple can be useful in solving or problems will find this an excellent reference maple s mathematical knowledge base now includes calculus linear algebra ordinary and partial differential equations number theory logic graph theory combinatorics statistics and transform methods although maple s main strength lies in its ability to perform symbolic manipulations it also has a substantial knowledge of a large number of numerical methods and can plot many different types of attractive looking two dimensional and three dimensional graphs after almost two decades of continuous improvement of its mathematical capabilities maple can now boast a user base of more than 300 000 academics researchers and students in different areas of mathematics science and engineering

the average person has little knowledge of the fact that at the dawn of the petroleum powered era there were simple known methods to reduce fuel consumption by fortifying petroleum distillates with ingredients that were cheap and readily available and although they had been researched and tested to be successful their potential benefits to the overall performance of the transportation systems were to be buried and forgotten this was all because of one reason they all significantly reduced fuel consumption the rise and stall of the piston engine documents the evolution of the gasoline piston engine and in the process exposes the design for what it is a heavy iron mechanism that consumes excessive amounts of gasoline while wearing itself out from relentless friction the truth of the matter is the cars we got to buy as commuters were equipped with engines that were manufactured in sizes and numbers matching the gallonage of petroleum the sales infrastructure was able to supply for any given year we were all part of one grand business plan in the process hundreds of better engine designs and fuel types were covered up even at the expense of the inventor s life if necessary

the annual asian semantic conference is one of the largest regional events in asia with focused topics related to the semantic with the decade round endeavor of semantic believers researchers and practitioners the semantic has made remarkable progress recently it has raised significant attention from us and uk governments as well as the european commission who are willing to deploy semantic technologies to enhance the transparency of egovernment the linked open data initiative is on its way to convert the current document into a data and to further enabling various data and service mashups the fast

adoption of semantic technologies in medical and life sciences has created impressive showcases to the world all these efforts are a crucial step toward enabling the take off and the success of the semantic the first asian semantic conference was successfully held in china in 2006 with the following editions in korea in 2007 and thailand in 2008 it fostered a regional forum for connecting researchers and triggering innovations this year the 4th asian semantic conference was held in shanghai china we received 63 submissions from asia europe and north america and 25 papers were accepted the acceptance rate is around 40 each submission was reviewed by at least three members of the program committee the chairs moderated the discussion of conflict reviews or invited external reviewers to reach the final decisions
