information security policies procedures and standards a practitioner s reference gives you a blueprint on how to develop effective information security policies and procedures it uses standards such as nist 800 53 iso 27001 and cobit and regulations such as hipaa and pci dss as the foundation for the content highlighting key terminology policy development concepts and methods and suggested document structures it includes examples checklists sample policies and procedures guidelines and a synopsis of the applicable standards the author explains how and why procedures are developed and implemented rather than simply provide information and examples this is an important distinction because no two organizations are exactly alike therefore no two sets of policies and procedures are going to be exactly alike this approach provides the foundation and understanding you need to write effective policies procedures and standards clearly and concisely developing policies and procedures may seem to be an overwhelming task however by relying on the material presented in this book adopting the policy development techniques and examining the examples the task will not seem so daunting you can use the discussion material to help sell the concepts which may be the most difficult aspect of the process once you have completed a policy or two you will have the courage to take on

even more tasks additionally the skills you acquire will assist you in other areas of your professional and private life such as expressing an idea clearly and concisely or creating a project plan

citrix presentation server allows remote users to work off a network server as if they weren t remote that means incredibly fast access to data and applications for users no third party vpn connection and no latency issues all of these features make citrix presentation server a great tool for increasing access and productivity for remote users unfortunately these same features make citrix just as dangerous to the network it s running on by definition citrix is granting remote users direct access to corporate servers achieving this type of access is also the holy grail for malicious hackers to compromise a server running citrix presentation server a hacker need not penetrate a heavily defended corporate or government server they can simply compromise the far more

vulnerable laptop remote office or home office of any computer connected to that server by citrix presentation server all of this makes citrix presentation server a high value target for malicious hackers and although it is a high value target citrix presentation servers and remote workstations are often relatively easily hacked because they are often times deployed by overworked system administrators who haven t even configured the most basic security features offered by citrix the problem in other words isn t a lack of options for securing citrix instances the problem is that administrators aren t using them eweek october 2007 in support of this assertion security researcher petko d petkov aka pdp said in an oct 4 posting that his recent testing of citrix gateways led him to tons of wide open citrix instances including 10 on government domains and four on military domains the most comprehensive book published for system administrators providing step by step instructions for a secure citrix presentation server special chapter by security researcher petko d petkov aka pdp detailing tactics used by malicious hackers to compromise citrix presentation servers companion site contains custom citrix scripts for administrators to install configure and troubleshoot citrix presentation server
