comprehensive research and a highly trained workforce are essential for the improvement of health and health care both nationally and internationally during the past 40 years the national research services award nrnsa program has played a large role in training the workforce responsible for dramatic advances in the understanding of various diseases and new insights that have led to more effective and targeted therapies in spite of this program the difficulty obtaining jobs after the postdoc period has discouraged many domestic students from pursuing graduate postdoc training in the united states more than 50 percent of the postdoc workforce is made up of individuals who obtained their ph d s from other countries indeed one can make a strong argument that the influx of highly trained and creative foreigners has contributed greatly to u s science over the past 70 years research training in the biomedical behavioral and clinical research sciences discusses a number of important issues including the job prospects for postdocs completing their training questions about the continued supply of international postdocs in an increasingly competitive world the need for equal excellent training for all graduate students who receive nih funding and the need to increase the diversity of trainees the book recommends improvements in minority recruiting more rigorous and extensive training in the responsible conduct of research and ethics increased emphasis on career development more attention to outcomes and the requirement for incorporating more quantitative thinking in the biomedical curriculum

clinical and translational research is a crucial link to the improvement of clinical care and practice many of the elements that are involved physicians nurses pharmacists laboratory testing medical records are also involved in the delivery of care to patients yet in the conduct of clinical research these elements are arrayed in different configurations and constrained by rules and regulations that are distinct from those that guide the practice of medicine in parallel with these considerations the conduct of clinical research demands a specific skill set specialized tools are required to formulate and design informative clinical trials and to interpret the findings from such experiments provided by publisher

pharmaceutical companies academic researchers and government agencies such as the food and drug administration and the national institutes of health all possess large quantities of clinical research data if these data were shared more widely within and across sectors the resulting research advances derived from data pooling and analysis could improve public health enhance patient safety and spur drug development data sharing can also increase public trust in clinical trials and conclusions derived from them by lending transparency to the clinical research process much of this information however is never shared retention of clinical research data by investigators and within organizations may represent lost opportunities in biomedical research despite the potential benefits that could be accrued from pooling and analysis of shared data barriers to data sharing faced by researchers in industry include concerns about data mining erroneous secondary analyses of data and unwarranted litigation as well as a desire to protect confidential commercial information

academic partners face significant cultural barriers to sharing data and participating in longer term collaborative efforts that stem from a desire to protect intellectual autonomy and a career advancement system built on priority of publication and citation requirements some barriers like the need to protect patient privacy present challenges for both sectors looking ahead there are also a number of technical challenges to be faced in analyzing potentially large and heterogeneous datasets this public workshop focused on strategies to facilitate sharing of clinical research data in order to advance scientific knowledge and public health while the workshop focused on sharing of data from preplanned interventional studies of human subjects models and projects involving sharing of other clinical data types were considered to the extent that they provided lessons learned and best practices the workshop objectives were to examine the benefits of sharing of clinical research data from all sectors and among these sectors including for example benefits to the research and development enterprise and benefits to the analysis of safety and efficacy sharing clinical research data workshop summary identifies barriers and challenges to sharing clinical research data explores strategies to address these barriers and challenges including identifying priority actions and low hanging fruit opportunities and discusses strategies for using these potentially large datasets to facilitate scientific and public health advances

because of the individualized nature of drug and therapeutic treatments clinical trials require participants who represent the diversity of the patient base if early trials do not have a broad patient base it can be difficult to know who may or may not benefit from or respond to a treatment later in addition to diversity in recruitment informed consent during participation is also crucial if participants do not fully understand what they are signing up for they may become confused mistrustful or drop out of a trial altogether confusing investigators and possibly affecting the generalizability of a study to explore the incorporation of health literacy practices into clinical trials the roundtable on health literacy convened a workshop titled clinical trials practice and impact on april 11 2019 in washington dc the workshop presentations and discussion centered around issues related to the challenges or barriers for diverse populations participation in clinical trials best practices for clinical trial sites and researchers incorporating health literacy practices and effective health literacy strategies for clear communication with participants this publication summarizes the presentation and discussion of the workshop
