resources it is generally defined as development that meets the needs of the present without compromising the ability of future generations to meet their own needs this definition is based on the ethical imperative of equity within and between generations moreover apart from meeting the basic needs of all sustainable development implies sustaining the natural life support systems on earth and extending to all the opportunity to satisfy their aspirations for a better life hence sustainable development is more precisely defined as a process of change in which the exploitation of resources the direction of investments the orientation of technological development and institutional change are all in harmony and enhance both current and future potential to meet human needs and aspiration to date various definitions and stationary state criteria of sustainability have been proposed many authors have been concerned with only part of the problem such as the technological assumptions the ability to substitute natural resources in economic transformation processes and the resilience and importance of ecological processes but the social dimension did not receive the same attention and has not been adequately integrated into formal analysis the engineering community has to play an important role in sustainable development with appropriate evaluation of the engineering systems in this respect energy water and environment systems require multi criteria evaluation methods for the assessment of the economic environmental and social aspect of the systems this open access book discusses the current role of smallholders in connection with food security and poverty reduction in developing countries it addresses the opportunities they enjoy and the constraints they face by analysing the availability access to and utilization of production factors due to the relevance of smallholder farms enhancing their production capacities and economic and social resilience could produce positive impacts on food security and nutrition at a number of levels in addition to the role of small farmers as food suppliers the book considers their role as consumers and their level of nutrition security it investigates the link between agriculture and nutrition in order to better understand how agriculture affects human health and dietary patterns given the importance of smallholdings strategies to increase their productivity are essential to improving food and nutrition security as well as food diversity popular science gives our readers the information and tools to improve their technology and their world the core belief that popular science and our readers share the future is going to be better and science and technology are the driving forces that will help make it better the concern for the well being of others could be the saving grace of the 21st century matthieu ricard s altruism an erudite brilliantly ranging synthesis of philosophy psychology and ages old wisdom is a radical call to kindness which has the potential as a new global movement to answer the biggest problems of our time the economy in the short term life satisfaction in the mid term and the environment in the long term as the faultlines of inequality and nationalism leave us ever more divided ricard challenges us to be better people and in the process make the world a better place boys life is the official youth magazine for the boy scouts of america published since 1911 it contains a proven mix of news nature sports history fiction science comics and scouting the national clean energy fund ncef announced in the government of india s budget 2010 11 is seen as a major step in india s quest for energy security and reducing the carbon intensity of energy funding research and innovative projects in clean energy technologies and harnessing renewable energy sources to reduce dependence on fossil fuels constitute the objectives of the ncef the ncef s utilization of funds is considered to be rather low and disbursements poorly aligned with the fund s stated objectives thus posing a potential risk of diluting the focus of ncef with adverse implications for the much needed research and innovation in the clean energy sector in india the book provides a detailed framework for promoting effective utilization and administration of ncef to this effect it identifies the most promising avenues for utilization of ncef resources for catalytic opportunities and deployment of new technologies it also identifies and prioritizes the specific energy sub sectors towards which the ncef resources are directed it also makes suggestions for designing a smart monitoring and evaluation framework for the ncef this work provides significant information for the government so that appropriate mid course corrections may be made in a timely manner this will also be useful in honing the strategic thinking on a suitable energy technology policy and an assessment of technology needs and other barriers to the clean energy sector in india
