taking a systems perspective this book enables the student to make sense of business behaviour by demonstrating how interrelated business processes determine the success of an organisation

Historical and Miscellaneous Books Published by Robert Clarke & Co 1874

introduces both the fundamentals of time dependent differential equations and their numerical solutions introduction to numerical methods for time dependent differential equations delves into the underlying mathematical theory needed to solve time dependent differential equations numerically written as a self contained introduction the book is divided into two parts to emphasize both ordinary differential equations odes and partial differential equations pdes beginning with odes and their approximations the authors provide a crucial presentation of fundamental notions such as the theory of scalar equations finite difference approximations and the explicit euler method next a discussion on higher order approximations implicit methods multistep methods fourier interpolation pdes in one space dimension as well as their related systems is provided introduction to numerical methods for time dependent differential equations features a step by step discussion of the procedures needed to prove the stability of difference approximations multiple exercises throughout with select answers providing readers with a practical guide to understanding the approximations of differential equations a simplified approach in a one space dimension analytical theory for difference approximations that is particularly useful to clarify procedures introduction to numerical methods for time dependent differential equations is an excellent textbook for upper undergraduate courses in applied mathematics engineering and physics as well as a useful reference for physical scientists engineers numerical analysts and mathematical modelers who use numerical experiments to test designs or predict and investigate phenomena from many disciplines

the events that took place on september 11th caused dr john brighton a naturopathic health consultant to ask himself questions about what role natural forms of healing might have in a scenario involving weapons of mass destruction wmd as he examined the issues and the nature of the threat he felt assured that a naturalistic approach could make a significant contribution in conjunction with that offered by conventional medicine moreover he felt that to use both would provide a more powerful deterrent than if either were used alone the naturalistic approach would augment the use of drugs by adding 5 extra lines of defense aimed at supporting and strengthening the immune system to deal with such a dire event these lines include a psychological dimension a social dimension a preventative dimension an environmental dimension a specific dimension the whole idea of this holistic strategy is to employ prevention and immune enhancing factors in order to reduce the level of crisis to begin with as a result the dependency on antibiotics there are no effective antivirals and other valuable medical resources can be considerably reduced and most importantly preserved for when they would be needed most another benefit of integrating these two systems would add what dr brighton calls synergistic complexity as a way to reduce the current crisis of germ resistance to many most potent antibiotics and to provide a holistic approach to all forms of wmd the book clarifies the scope of the threat we face by examining the variety of biological chemical and nuclear threats the factors involved in the creation of wmd the uncanny

capacity of microbes to develop resistance to our medications the threat of bioengineering and the creation of superbugs how synergistic complexity could provide a possible solution a chapter is dedicated to focusing on the specific nature and challenges posed by each biological chemical and nuclear agent this includes a description of the agent how it causes harm how it might be used as a weapon and the possibility of it being used how it is detected diagnostically and in the field the conventional method of care and treatment the suggested natural forms of defense including herbs vitamins minerals and other natural substances and healing therapies the book ends with a forward looking chapter on emerging technologies that have promise of increasing our level of defense against wmd a bibliography and a full section on resources are available
