this volume examines how several key components of the mathematics education system in the united states fail to provide teachers with adequate and effective tools to teach mathematics in k 12 classrooms these components consist of teachers own learning experiences as students in k 12 classrooms their undergraduate or graduate trainings in mathematics and their in service professional development trainings newton argues that unless we improve these system components as a

whole and recognize the importance of teaching future mathematics teachers explicitly and rigorously the topics they are expected to teach teachers will continue to recycle a body of incoherent and incomprehensible mathematical knowledge to their students because these are the only types of mathematical knowledge they have at their disposal both in terms of what they themselves have learned as k 12 students and in terms of the mathematical resources available to them including the textbooks they rely on to teach as mathematics teachers

mathematics curriculum which is often a focus in education reforms has not received extensive research attention until recently ongoing mathematics curriculum changes in many education systems call for further research and sharing of effective curriculum policies and practices that can help lead to the improvement of school education this book provides a unique international perspective on diverse curriculum issues and practices in different education systems

offering a comprehensive picture of various stages along curriculum transformation from the intended to the achieved and showing how curriculum changes in various stages contribute to mathematics teaching and learning in different educational systems and cultural contexts the book is organized to help readers learn not only from reading individual chapters but also from reading across chapters and sections to explore broader themes including identifying what is important in mathematics for teaching and learning in different education systems understanding mathematics curriculum and its changes that are valued over time in different education systems identifying and analyzing effective curriculum practices probing effective infrastructure for curriculum development and implementation mathematics curriculum in school education brings new insights into curriculum policies and practices to the international community of mathematics education with 29 chapters and four section prefaces contributed by 56 scholars from 14 different education systems this rich collection is indispensable reading for mathematics educators researchers curriculum developers and graduate students interested in learning about recent curriculum development research and practices in different education systems it will help readers to reflect on

curriculum policies and practices in their own education systems and also inspire them to identify and further explore new areas of curriculum research for improving mathematics teaching and learning

the mathematics curriculum what mathematics is taught to whom it is taught and when it is taught is the bedrock to understanding what mathematics students can could and should learn today s digital technology influences the mathematics curriculum in two quite different ways one influence is on the delivery of mathematics through hardware such as desktops laptops and tablets another influence is on the doing of mathematics using software available on this hardware but also available on the internet calculators or smart phones these developments rapidly increasing in their availability and decreasing in their cost raise fundamental questions regarding a mathematics curriculum that has traditionally been focused on paper and pencil work and taught in many places as a set of rules to be practiced and

learned this volume presents the talks given at a conference held in 2014 at the university of chicago sponsored by the center for the study of mathematics curriculum the speakers experts from around the world and inside the usa were asked to discuss one or more of the following topics changes in the nature and creation of curricular materials available to students transformations in how students learn and how they demonstrate their learning rethinking the role of the teacher and how students and teachers interact within a classroom and across distances from each other the result is a set of articles that are interesting and captivating and challenge us to examine how the learning of mathematics can and should be affected by today s technology

this volume will highlight papers presented at the second nebraska symposium on information technology in education with chapters focusing on the latest research findings and theoretical principles

for using technology in education the volume will extend findings from current research on technology mediated instruction into a set of practical principles for designers teachers and managers of educational technology contributors will identify technical and design features required for sharing of content and assessment tools and will target promising areas for future research and development in technology based learning instruction and assessment
