nowadays the internet has become an irreplaceable tool feeding us information about new innovations and the evolution of the markets relating to all human activities what the internet lacks though is a guiding narrative thread which is crucial to understand the evolution from old technologies into the technologies available today and to benefit from the commentary which could elucidate that process of evolution in spite of its inherent

richness no encyclopedia can constitute the one and only referential information source the actors involved also have the right to be heard all those who have devoted their working lives to the collective effort of edifying networks can of course present their personal views about the evolution of the world of telecommunications and thus provide invaluable testimony to companies in this area who can make use of it it is that approach which is adopted in this book whilst the primary objective of this book is to encourage smes to use digital technologies and help them to organize with that goal in mind it has proved necessary to describe the transformations currently under way in the field of networks and to outline the efforts to obtain a competitive edge in terms of clerical applications compare the various techniques that are available for high data rate communications and touch upon the advent of the internet of things cloud computing and various new multimedia technologies all in all this book should help companies particularly smes to garner overall information about the current movement in the area of networking and assist them in putting in place and managing their own communications systems
