Indian Muslim(s) after Liberalization

close to the turn of the century and almost 45 years after independence india opened its doors to free market liberalization although meant as the promise to a better economic tomorrow three decades later many feel betrayed by the economic changes ushered in by this new financial era here is a book that probes whether india s economic reforms have aided the development of indian muslims who have historically been denied the fruits of economic development maidul islam points out that in current political discourse the muslim question in india is not articulated in terms of demands for equity instead the political leadership camouflages real issues of backwardness prejudice and social exclusion with the rhetoric of identity and security historically informed empirically grounded and with robust analytical rigour the book tries to explore connections between multiple forms of muslim marginalization the socio economic realities facing the community and the formation of modern muslim identity in the country at a time when post liberalization economic policies have created economic inequality and joblessness for significant sections of the population including muslims the book proposes working towards a radical democratic deepening in india

Earthquake Analysis and Design of Industrial Structures and Infra-structures

1981-09-20

despite significant development in earthquake analysis and design in the last 50 years or more different structures related to industry infra structure and human habitats get destroyed with monotonic regularity under strong motion earthquake even the recent earthquake in mexico in september 2017 killed a number of people and destroyed national assets amounting to hundreds of millions of dollars careful evaluation of the technology reveals that despite significant development in earthquake engineering most of the books that are available on the market for reference are primarily focused towards buildings and framed type structures it is accepted that during an earthquake it is buildings that get destroyed most and has been the biggest killers of human life yet there are a number of structures like retaining walls water tanks bunkers silos tall chimneys bridge piers etc that are equally susceptible to earthquake and if damaged can cause serious trouble and great economic distress unfortunately many of these systems are analyzed by techniques that are too simplified unrealistic obsolete or nothing is done about them ignoring completely the seismic effects as no guidelines exist for their analysis design like seismic analysis of counterfort retaining walls or dynamic pressures on bunker walls etc this highly informative book addresses many of these items for which there exists a significant gap in technology and yet remain an important life line of considerable commercial significance the book is an outcome of authors academic research and practice across the four continents usa europe africa and asia in the last thirty two years

where many of these technologies have been put in practice that got tested against real time earthquakes all methods presented herein have been published previously in peer reviewed research journals and international conferences of repute before being put to practice professionals working in international epc and consulting engineering firms graduates taking advanced courses in earthquake engineering doctoral scholars pursuing research in earthquake engineering in the area of dynamic soil structure interaction dssi and advanced under graduates wanting to self learn and update themselves on earthquake analysis and design are greatly benefited from this book
