the utilisation of biomass is increasingly important for low or zero carbon power generation developments in conventional power plant fuel flexibility allow for both direct biomass combustion and co firing with fossil fuels while the integration of advanced technologies facilitates conversion of a wide range of biomass feedstocks into more readily combustible fuel biomass combustion science technology and engineering reviews the science and technology of biomass combustion conversion and utilisation part one provides an introduction to biomass supply chains and feedstocks and outlines the principles of biomass combustion for power generation chapters also describe the categorisation and preparation of biomass feedstocks for combustion and gasification part two goes on to explore biomass combustion and co firing including direct combustion of biomass biomass co firing and gasification fast pyrolysis of biomass for the production of liquids and intermediate pyrolysis technologies largescale biomass combustion and biorefineries are then the focus of part three following an overview of large scale biomass combustion plants key engineering issues and plant operation are discussed before the book concludes with a chapter looking at the role of biorefineries in increasing the value of the end products of biomass conversion with its distinguished editor and international team of expert contributors biomass combustion science technology and engineering provides a clear overview of this important area for all power plant operators industrial engineers biomass researchers process chemists and academics working in this field reviews the science and technology of biomass combustion conversion and utilisation provides an introduction to biomass supply chains and feedstocks and outlines the principles of biomass combustion for power generation describes the categorisation and preparation of biomass feedstocks for combustion and gasification

the majority of amputations in the western world today are due to vascular disease despite the advances in surgical treatment of this disease particularly by reconstruction it is a sad fact that the number of amputations performed in these countries each year for vascular disease is increasing most of these amputees are elderly and their life expectancy is short so it is important that the treatment and rehabilitation that they receive is informed appropriate efficient and swift to enable them to return successfully to life in the community for their remaining years management of this group of patients has proved to be successful only if a multidisciplinary team approach is adopted until recently in the uk this approach sadly has only been implemented by a few centres however with the publication of the mcoll report into the prosthetic and wheelchair service in 1986 interest in the care of the amputee is growing throughout the country this book covers all aspects of amputation from disease and diagnosis to rehabilitation and community discharge with emphasis on the management of the largest group the vascular lower limb amputee a team approach is described and emphasized as being essential for good results and subsequent successful return into the community the role of each of the important disciplines is described in relation to the appropriate part of the rehabilitation phase
