the practice of comparing languages has a long tradition characterized by a cyclic pattern of interest its meeting with corpus linguistics in the 1990s has led to a new sub discipline of corpus based contrastive studies the present volume tackles two main challenges that had not yet been fully addressed in the literature namely an empirical assessment of the nature of the data commonly used in cross linguistic studies e g translation data versus comparable data and the development of advanced methods and statistical techniques suitably adapted to contrastive research settings the papers collected in this volume endeavour to find out what new types of data are most useful for what kind of contrastive questions and which advanced statistical techniques are most suited to deal with the multidimensionality of contrastive research questions answers to these questions are provided through the contrastive analysis of various language pairs or groups and a wide variety of phenomena situated at almost all linguistic levels in sum this book provides an update on new methodological and theoretical insights in empirical contrastive linguistics and will stimulate further research within this field

aging introduces disturbances to the gait and posture of individuals such alterations can originate or result from a wide range of causes making it challenging to understand when modifications are related to pathological or physiological causes many disciplines come together to perform this kind of analysis e g computational and

experimental mechanics image processing medicine biology physiology machine learning and data science gait analysis is particularly sensitive to the interactions of different disciplines this technique allows the study of human movements but only through a multidisciplinary approach it is possible to infer relations of causation narrow studies focusing on specific techniques are important to develop the fundamental tools required to study movement in recent years significant methodological advancements have been independently made in these fields however to cross the borders of current science and develop consistent results any new study needs to set interdisciplinary goals an inclusive approach merging multiple aspects would be key in targeting pharmacological or rehabilitation interventions and improving patient care as a whole

in recent years scholars and practitioners have increasingly recognized that human resource management hrm has paid insufficient attention to the impact of context while research has been devoted to examining the impact of national context on hrm systems this literature has been largely separate from that focused on other levels of context affecting organizational choices in hrm strategies such as the impact of the organizational environment industry sector occupation or workforce characteristics in addition research has tended to consider elements of context in isolation rather than considering its impact at different levels the goal of the oxford handbook of contextual approaches to human resource management is to provide a more holistic approach to developing a contextual understanding of hrm this handbook offers a comprehensive understanding of the influence of contextual characteristics on the design and implementation of hrm systems rather than focusing on a single level or approach to examining context the handbook provides both conceptual and empirical analyses of different elements of context using a range of different lenses and measures in order to explore the influence of contextual factors at multiple levels the volume assembles a range of detailed accounts of how context affects the design implementation and impact of hrm activities

ecocriticism is a critical approach that focuses on the representation in literature of the non human elements of the natural world a method of inquiry that has been largely limited to literature written in english the aim of ecocritical approaches to literature in french is twofold to introduce ecocriticism to scholars of french language literature and to open ecocriticism to the vision and voices of french literature the chapters look at work not only from france but also from north america the caribbean and africa the discussions include fiction poetry film and pedagogy the goal of the collection is to demonstrate not only the applicability of ecocritical inquiry to literature in french but to demonstrate the possibilities of ecocritical theory on the study of french literature and also for ecocriticism itself this collection will be a useful resource both for scholars of french language literature and also for ecocritics who may have had only limited contact with literatures in languages other than english

International Approaches to Prevention in Mental Health and Human Services 1995

as academics in postcolonial caribbean countries we have been trained to believe that research should be objective a measurable benefit to the public good and quantifiable in nature so as to generalize findings to develop knowledge societies for economic growth what happens however when the very word research connotes a derogatory term or semblance of distrust smith 1999 speaks towards the distrustful nature of the term as a legacy of european imperialism and colonialism against this backdrop how do caribbean researchers leverage recognized and valued indigenous methods of knowing and understanding for and by the caribbean populace how do we learn from indigenous research methods such as kaupapa maori smith 1999 and develop an understanding of research that is emancipatory in nature decolonizing qualitative methods are rooted in critical theory and grounded in social justice resistance change and emancipatory research for and by the other said 1978 rodney s 1969 legacy of groundings provides a caribbean oriented ethnographic approach to collecting data about people and culture it is an anti imperialist method of data collection focused on the socioeconomic and political environment within the post colonial context similar to rodney other critical caribbean scholars have moved the research discourse to center on the notions of resistance struggle chevannes 1995 feraria 2009 and decolonizing methodologies this proposed edited volume will provide a collective body of scholarship for innovative uses of decolonizing qualitative research in order to theorize and conduct decolonizing research one can argue that the researcher as self and as the other needs to be interrogated borrowing from an autoethnographic ontology the researcher or investigator recognizes the self as the unit of measure and there is a concerted effort to continuously see the self seeing the self through and as the other alexander 2005 ellis 2004 this level of interrogation may require frameworks such as reasonable humanism in which there is a clear understanding of the role of the researcher and researched from a physiological and psychosocial standpoint thereafter the researcher is better prepared to enter into a discourse about decolonizing methodologies the origins of qualitative inquiry in the caribbean can be traced to political and economic discourses marxism postcolonialism neocolonialism capitalism liberalism postmodernism which

have challenged ways of knowing and the construction of knowledge evans 2009 traced the origins of qualitative inquiry to slave narratives proprietor s journals missionaries reports and travelogues common to the caribbean is an understanding of how colonial legacies of research have ridiculed oral traditions language and ways of knowing often rendering them valueless and inconsequential this proposed edited volume acknowledges the significance of decolonizing approaches to qualitative research in the caribbean and the wider caribbean diaspora it includes an audience of scholars teacher researchers and students primarily in and across the humanities social sciences and educational studies this proposed volume would provide much needed knowledge and best practice strategies to the community of researchers engaged in decolonizing methodologies additionally this volume will allow readers to think of new imaginings of research design that deconstruct power and privilege to benefit knowledge communities and participants it will spark key objectives directions and frameworks for deeper discussions and interrogations of normative westernized and hegemonic approaches to qualitative research lastly the volume will welcome empirical studies of application of decolonizing methodologies and theoretical studies that frame critical discourse

the newly emerging field of theoretically informed but simultaneously empirically based syntax is dynamic but little represented in the literature this volume addresses this need while there has previously been something of a gulf between theoretical linguists in the generative tradition and those linguists who work with quantitative data types this gap is narrowing in the light of the empirical revolution in the study of syntax even people whose primary concern is grammatical theory take note of processing effects and attribute certain effects to them correspondingly workers focusing on the surface evidence can relate more to the concepts of the theoreticians because the two layers of explanation have been brought into contact and these workers too must account for the data gathered by the theoreticians an additional innovation is the generative analysis of historical data this is now seen as psycholinguistic theory relevant data like any other these papers are thus a snapshot of some of the work currently being done in evidence based grammar using both experimental and historical data
