Catalog of Copyright Entries. Third Series 1971

this advanced textbook on modeling data analysis and numerical techniques for marine science has been developed from a course taught by the authors for many years at the woods hole oceanographic institute the first part covers statistics singular value decomposition error propagation least squares regression principal component analysis time series analysis and objective interpolation the second part deals with modeling techniques finite differences stability analysis and optimization the third part describes case studies of actual ocean models of ever increasing dimensionality and complexity starting with zero dimensional models and finishing with three dimensional general circulation models throughout the book hands on computational examples are introduced using the matlab programming language and the principles of scientific visualization are emphasised ideal as a textbook for advanced students of oceanography on courses in data analysis and numerical modeling the book is also an invaluable resource for a broad range of scientists undertaking modeling in chemical biological geological and physical oceanography

L'Enseignement mathématique 1980

advances in heat transfer fills the information gap between regularly scheduled journals and university level textbooks by providing in depth review articles that are from a broader scope than in traditional journals or texts the articles which serve as a broad review for experts in the field are also of great interest to non specialists who need to keep up to date on the results of the latest research this serial is essential reading for all mechanical chemical and industrial engineers working in the field of heat transfer or in graduate schools or industry compiles the expert opinions of leaders in the industry fills the information gap between regularly scheduled journals and university level textbooks by providing in depth review articles over a broader scope than in traditional journals or texts essential reading for all mechanical chemical and industrial engineers working in the field of heat transfer or in graduate schools or industry
