nnnjavannnnnnn an exploration of how computer algorithms can be applied to our everyday lives to solve common decision making problems and illuminate the workings of the human mind what should we do or leave undone in a day or a lifetime how much messiness should we accept what balance of the new and familiar is the most fulfilling these may seem like uniquely human guandaries but they are not computers like us confront limited space and time so computer scientists have been grappling with similar problems for decades and the solutions they ve found have much to teach us in a dazzlingly interdisciplinary work brian christian and tom griffiths show how algorithms developed for computers also untangle very human questions they explain how to have better hunches and when to leave things to chance how to deal with overwhelming choices and how best to connect with others from finding a spouse to finding a parking spot from organizing one s inbox to peering into the future algorithms to live by transforms the wisdom of computer science into strategies for human living המחוחת המשליע לא power packed book on beating no limit hold em is one of the three most influential poker books ever york times book review editors choice from an oxford economist a visionary account of how technology will transform the world of work and what we should do about it from mechanical looms to the combustion engine to the first computers new technologies have always provoked panic about workers being replaced by machines for centuries such fears have been misplaced and many economists maintain that they remain so today but as daniel susskind demonstrates this time really is different breakthroughs in artificial intelligence mean that all kinds of jobs are increasingly at risk drawing on almost a decade of research in the field susskind argues that machines no longer need to think like us in order to outperform us as was once widely believed as a result more and more tasks that used to be far beyond the capability of computers from diagnosing illnesses to drafting legal contracts from writing news reports to composing music are coming within their reach the threat of technological unemployment is now real this is not necessarily a bad thing susskind emphasizes technological progress could bring about unprecedented prosperity solving one of humanity s oldest problems how to make sure that everyone has enough to live on the challenges will be to distribute this prosperity fairly to constrain the burgeoning power of big tech and to provide meaning in a world where work is no longer the center of our lives perceptive pragmatic and ultimately hopeful a world without work shows the way as poker theory develops the field is becoming more abstruse and mathematical gradually becoming less accessible to the lavperson the intelligent poker player by philip newall aims to reverse this trend by presenting a cohesive and sophisticated method of play in
