do and how should i act the format provides the opportunity to move beyond the individual realm when appropriate resolving issues within an institutional or societal perspective the text is divided into two sections ethics for the physical therapist and types of ethical decisions case analysis they are designed to integrate with one another but each section can also be used separately part i provides more didactic foundational material while part ii strives to apply ethical decision making tools to relevant cases in physical therapy practice with the second section focusing on case analyses the purpose of ethics in physical therapy is to give students and clinicians a lens through which to analyze contemporary ethical challenges philosophical theory within the text is limited to that which can be applied practically in the clinical setting this book is not intended to be a work on ethical behavior rather it is designed to provide students and clinicians with a framework in which to approach the uncertainty of ethical decision making with tools to aid their inherent judgment dentistry is not only about understanding the causes of oral disease and having the technical expertise to treat them patients frequently challenge practitioners with ethical dilemmas psychological and social problems health and welfare difficulties and personal demands this book covers the case histories of six

individuals and the dental problems they encounter through their lives each case is loosely based on a real individual to allow the senior dentistry student to develop an understanding of the many issues they may face in daily clinical practice although all the patients featured in the book have problems related to oral and dental diseases their successful long term management requires both a profound awareness of modern treatment options and a broad knowledge of law applied to dentistry the ethics of dental care plus the psychology and sociology of disease and health related behaviour each chapter describes a hypothetical patient and how he or she presented or might present to a general dental practitioner the various treatment options which could be chosen by the patient s practitioner are included and the advantages and disadvantages of the various treatment plans are described the medium and long term outcomes for that patient in terms of their oral well being are then covered so that the reader can appreciate how even seemingly inconsequential treatment decisions can impact on a person many years after their encounter with the dentist this longitudinal approach will help the reader to view dealing with patients problems as a lifetime s work rather than as a set of one off interventions as attention moves rapidly towards comparative approaches the research and teaching of company law has somehow lagged behind the overall purpose of this book is therefore to fill a gap in the literature by identifying whether conceptual differences between countries exist rather than concentrate on whether the institutional structure of the corporation varies across jurisdictions the objective of this book will be pursued by focusing on specific cases and how different countries might treat each of these cases the book also has a public policy dimension because the existence or absence of differences may lead to the question of whether formal harmonisation of company law is necessary the book covers 10 legal systems with respect to countries of the european union it focuses on the most populous countries germany france the uk spain italy and poland as well as two smaller member states finland and latvia in addition the laws of two of the world s largest economies the us and japan are included for the purposes of wider comparison all of these jurisdictions are subjected to scrutiny by deploying a comparative case based study on the basis of these case solutions various conclusions are reached some of which challenge established orthodoxies in the field of comparative company law expert public psychiatrists use case studies to share best practice strategies in this clinically oriented introduction to community mental health today the majority of psychiatrists work with people who suffer not only from mental illness but also from poverty trauma social isolation and discrimination they cannot do this work alone but instead
